INTRODUCING
alubreeze
METAL LOUVERS BY ALUDECOR

WORLD'S MOST TESTED MCP BRAND
205 TESTS

With the promise of unparalleled design versatility and paint consistency, Alubreeze comes in not one, not two, but three precision-engineered angles — 30°, 45° and 90°.
Smartly designed to block heat gain and cut glare without obstructing daylight, Alubreeze also provides acoustic insulation.

In essence, Alubreeze offers a holistic experience — making a bold visual statement, while enhancing liveability.

- Superior solar control
- Acoustic insulation
- 100% recyclable aluminium
- Climate-conscious design
- Powder-free coating for better durability
- Easy installation & low maintenance

From the desk of the Patron

With a feeling of great joy and pride, I extend my warm greetings to all members of the Government College of Architecture Alumni Association (GCAAA) on this special occasion celebrating the Silver Jubilee and Ruby Jubilee of two distinguished batches of our alumni. These milestones mark not only the passage of time but also the enduring bond between our institution and its graduates who continue to bring honour to their alma mater through their achievements and contributions to society.
Having the privilege of serving as the Principal and Dean, I hold this institution close to my heart. Witnessing its evolution over the years and seeing our alumni excel in diverse spheres fills me with deep pride and gratitude. The college has grown into a an architecture institute with state of the art technical facilities.

DR. VANDANA SEHGAL
Principal and dean- Faculty of Architecture and Planning, AKTU

> "Reunions such as this are moments of reflection and celebration"

Each of you represents the spirit, dedication, and creative excellence that have long defined our college. The institution consistently seeks industry tie ups with the help of its vast alumni base spread across the globe.
Reunions such as this are moments of reflection and celebration – opportunities to revisit shared experiences, rekindle friendships, and renew our collective commitment to the ideals of architectural education. The GCAAA has played an instrumental role in nurturing this sense of belonging and in creating a vibrant platform that connects generations of architects bound by a common legacy.
As we celebrate these joyous jubilees, I extend my heartfelt congratulations to all alumni and appreciation to the GCAAA for their continued efforts in strengthening the bridge between the past and the future. May this association continue to inspire collaboration, mentorship, and innovation in the years to come.

With warm regards and best wishes,
Dr. Vandana Sehgal Principal and Dean,
Faculty of Architecture and Planning
Dr. A.P.J. Abdul Kalam Technical University, Lucknow
(Formerly Govt. College of Architecture Lucknow)

From the desk of the President

The year 2025 seems to be very special when our alma mater is stepping into celebration of 'Silver Jubilee' batch, first of this century, the passing out year of 2000. While digging into the past, we came across another milestone where the first-degree batch of passing out year 1985 is also celebrating their 'Ruby Jubilee'.

This is a great honor for all of us at G.C.A. Alumni Association to watch this remarkable fete which talks about the historical value, the depth of knowledge, the long-lasting experience and the mature outlook through the batch of 1985.
During recent interactions, the knowledge level of the first batch seems to be as young as the batch of 2000, because of their passion for work and the dedication to the profession.

AR. ANUPAM MITTAL
President,
GCA Alumni Association

This is for the first time when GCAAA has started this celebration jointly for the 'Silver Jubilee' batch along with the batch of 'Ruby Jubilee' which can be continued in upcoming years while inviting all of them in the campus where they can share their everlasting memories with all of us and together, we will cherish the moment. I would personally like to salute Ar. Rajiv Kacker and Ar. Mohd. Sabahat for accepting the invitation to call their batch on behalf of GCAAA. It shows their everlasting affection for the alma mater. While growing with age, we all are also growing and progressing in our life and parallel to it, we can see our institution is also reaching heights. You all are also growing and our efforts can be seen everywhere in India and abroad. It has taken a high
position in corporate sectors along with the Central & State government organizations, metro corporations etc. and continuously rising their path in professional practice. We are ready to see the growth chart which promises the higher and higher position of GCA amongst other institutions, achieving heights over the years. Together, we wish each other the blessings of alma mater to keep shining and spread good vibes for each, every member of GCA alumni association.

Regards,
Ar. Anupam Mittal
Batch of 1994
President, GCA Alumni Association

From the desk of the General Secretary

Dear Alumni, Faculty Members, and Students,

It gives me immense pleasure to extend warm greetings to all on the joyous occasion of our 9th GBM and Alumni Reunion. This gathering is not merely a meeting of old friends and familiar faces, but a celebration of shared memories, enduring bonds, and the collective journey that began within the walls of our beloved institution.
The GCA Alumni Association is committed to strengthening the bridge between our alumni and the institution. Through mentorship programs, collaborative initiatives, and knowledge-sharing platforms, we aim to create opportunities for our graduates to give back — by inspiring, guiding, and supporting the next generation of architects.
As part of our Broadening Out-reach to alumni internationally and nationally, many gatherings are held in different parts of the country. It is heartening to see alumni reaching out to their seniors and juniors while visiting varied cities. The Alumni database continues to be updated while alumni lectures are a constant feature annually.

A couple of years ago GCAAA initiated the felicitation of alumni members who made a mark in their fields of academia, practice and industry. Continuing the practice, this year we are honoured to award three eminent alumni who have been achievers in their respective domains. Ar Rajiv Kacker and Ar. Md. Sabahat have contributed immensely to our alma mater in academics and are 1985 batch graduates. On the other hand Ar. Ranjan Shukla passout of 1989 batch has practiced architecture in Lucknow contributing to transforming the urbanscape of this state beside others. I feel exalted to be able to share our gratitude with them.

AR. VISHAL GULATI
General Secretary,
GCA Alumni Association
Batch of 1996

On behalf of the Association, I extend heartfelt gratitude to our respected faculty, who continue to nurture creativity and critical thinking; to our organizing committee, for their tireless efforts in making this reunion possible; and to every alumnus and alumna whose presence and participation enrich this event.
As we reach almost five decades of formal inception of GCA, the Alumni Association looks forward to grow in leaps and bounds and maintain the spirit of brotherhood and fraternity. May we continue to support each other for betterment of the profession and our alma mater.
May this reunion rekindle old friendships, spark new collaborations, and remind us of the shared passion that unites us — the love for architecture, design, and our alma mater.

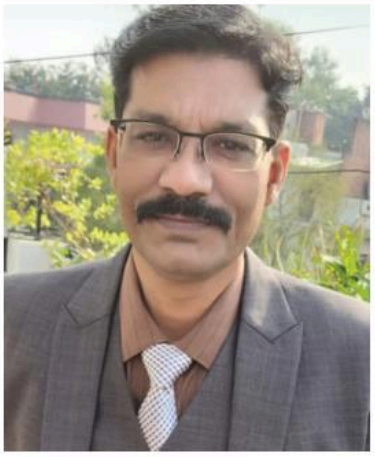
From the desk of the Treasurer

Dear Seniors, Juniors and Friends,

On the onset I welcome you to the 9th GBM of GCAAA.I am delighted to share snapshot of the recent financial performance and brief you about our strategies for fortifying the financial foundation of our esteemed Almuni Association .

Over the past year our revenue streams have seen a positive growth. Membership dues, donations and fund fundraising effort have collectively increased. This upward trend demonstrates the unwavering support and dedication of our alumni community towards the Association's mission.

Through prudent financial stewardship, we have streamlined our expenses without compromising the quality our programs and initiatives. This efficient resource allocation has allowed us to maximize the impact of every Rupee spent.



AR. AVANISH GANGWAR
Treasurer, GCA Alumni Association
Batch of 2002

Looking ahead our goal is to further bolster the Association's financial stability. We aim to include diversifying revenue sources, enhancing fundraising efforts, and exploring innovative avenues for financial growth.

> " We aim to including diversifying Revenue sources, enhancing fundraising Efforts, and exploring innovative avenue for financial growth. "

We are in the process of taking several new initiatives, such as long term association with sponsors designed to augment our financial standing These strategies will not only expand our revenue channels but also ensure a sustainable financial future of the Association.

We are committed to fostering transparency in our financial operations. To achieve this, we will continue providing regular update on our financial performance, inviting input and feedback from all members. Your insights are invaluable as we collectively shape the future of our Association.

I extend my gratitude to each and every one of you for your unwavering support. Thank you for your dedication and commitment to our shared goals. Should you have any suggestions or questions regarding our financial strategy, please feel free to reach out.

From the desk of the
Joint Secretary

आदरणीय Seniors और प्रिय मित्रों,

It is with profound joy and genuine आत्मीयता that I extend my warm greetings to you all on the occasion of the Annual Alumni Meet 2025. As we gather once again in the familiar surroundings of our beloved GCA, we are reminded of those सुनहरे समय that nurtured our dreams, friendships, and professional aspirations.

The celebration of the **Silver Jubilee of the Batch of 2000** and the **Ruby Jubilee of the Batch of 1985** marks not only milestones of time but also the enduring spirit of excellence, creativity and साधना that defines our GCA fraternity. On this occasion, we bow in श्रद्धा and deep gratitude to our revered teachers and mentors, whose guidance and inspiration continue to पथ प्रदर्शक of our journeys.

This Souvenir (स्मारिका) stands as a humble स्मृति संचय, capturing the essence of our shared legacy and everlasting bond with our alma mater. May the spirit of camaraderie, learning and संवेदना that GCA has instilled in us continue to guide our paths and strengthen our connection with one another.

आभार सहित

Architect Shashank Misra
(GCA 1996 - 2001 Batch)
NOIDA, Uttar Pradesh.
(Joint Secretary – GCAAA)

AR. SHASHANK MISRA
Joint Secretary – GCAAA
Batch of 1996 - 2001

From the desk of the Editor

AR. SHIPRA SINGH
Editor, GCA Alumni Association
Batch of 2008

Dear Fellow GCA family members,

As we gather once again to celebrate our shared journey, Dharohar stands as a tribute to time; to memories shaped in classrooms, friendships that outlast distance, and ideas that continue to build our collective legacy. This year's edition holds special meaning as we honor the Silver Jubilee Batch of 2000, a milestone that reminds us how deeply our roots continue to nurture our wings.

Architecture, much like memory, is built layer by layer. Within these pages, we revisit the foundations of our college, the spirit that shaped us, and the ever-evolving stories of our alumni who have carried its essence into the world. Their achievements, perspectives, and reflections capture both the continuity and change that define our profession.

The Alumni Meet brings all batches together, not just to look back, but to look around, to rediscover the bond that time can never erode. As you read through this issue, may it rekindle pride, laughter, and inspiration drawn from our shared heritage.

" Here's to the Class of 2000 and to every batch that continues to add new chapters to the ever-growing story of GCA. "

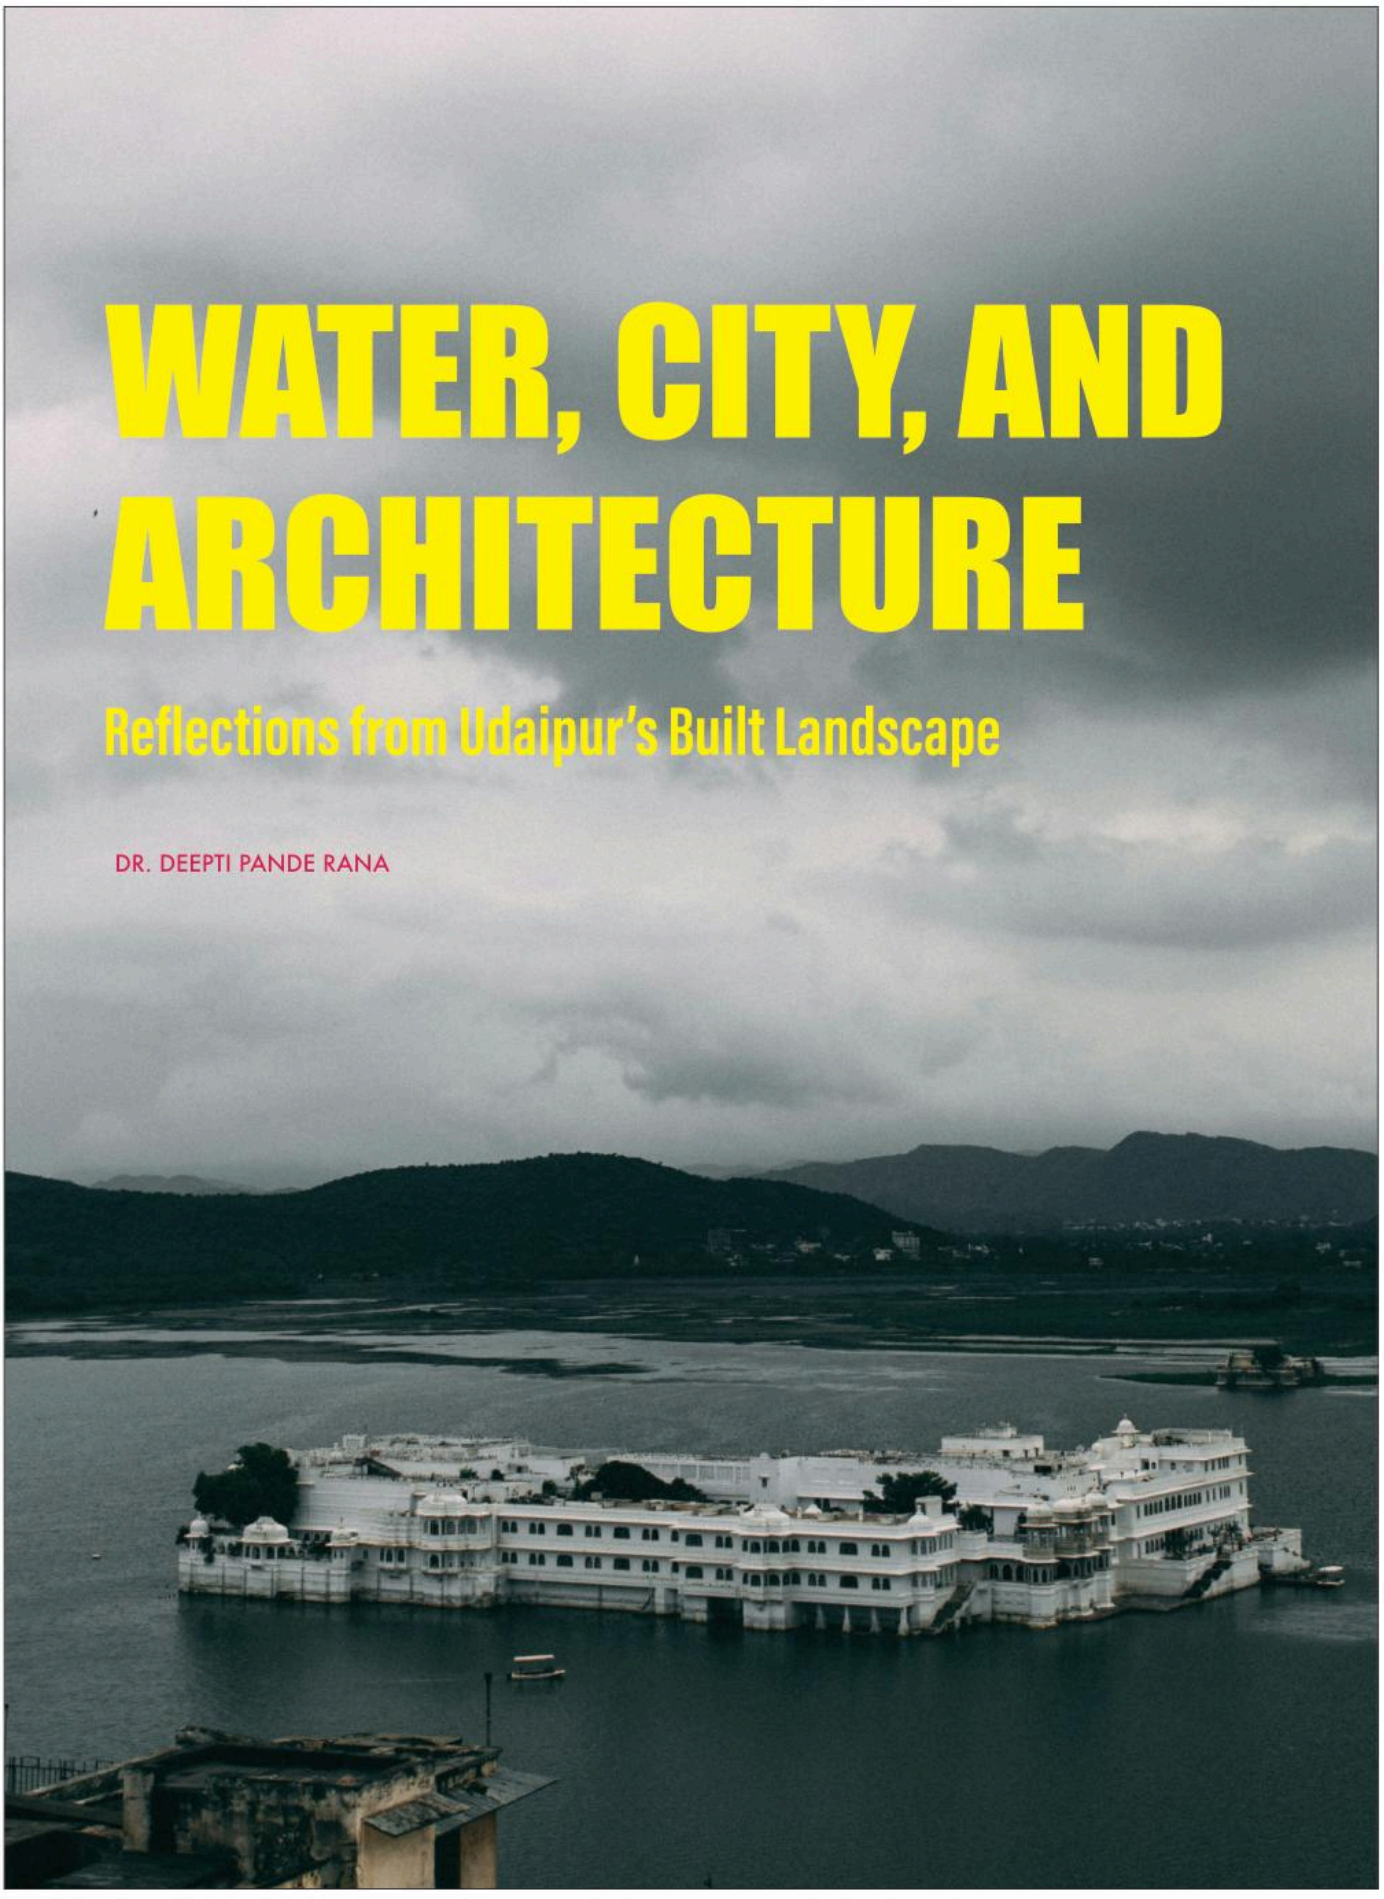
WATER, CITY, AND ARCHITECTURE

Reflections from Udaipur's Built Landscape

DR. DEEPTI PANDE RANA



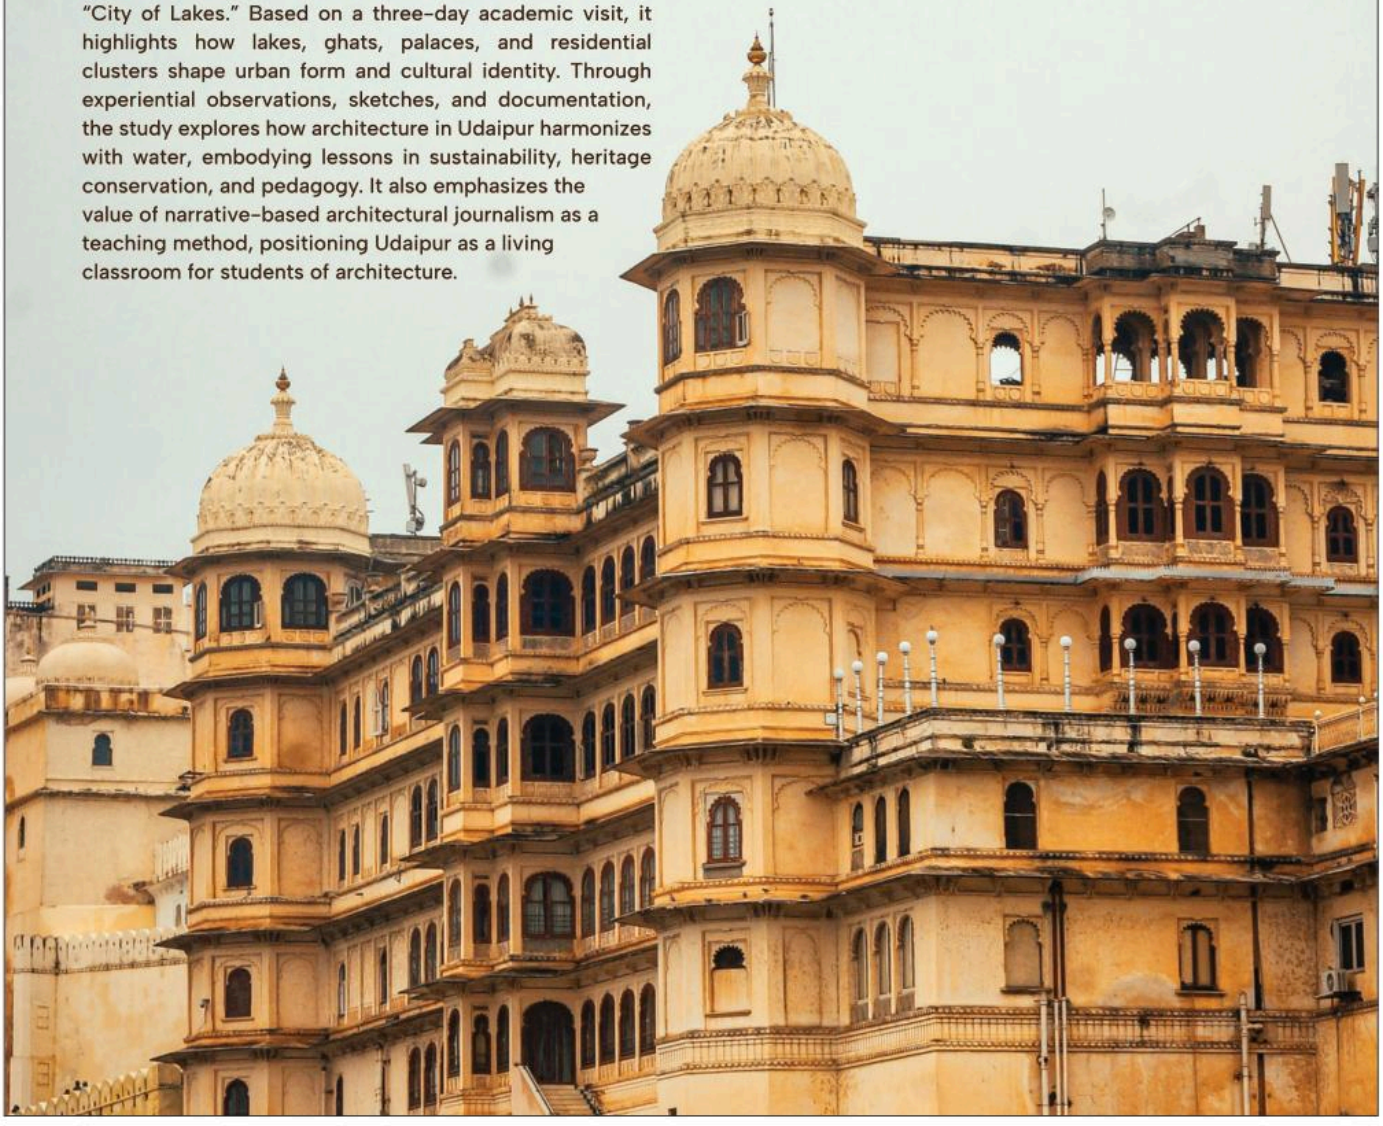
INTRODUCTION

Founded in 1559 by Maharana Udai Singh II, Udaipur is strategically planned around interconnected artificial lakes such as Pichola, Fateh Sagar, Swaroop Sagar, and Udai Sagar. These lakes shaped settlement patterns, civic spaces, and cultural identity, transforming water into both a utility and a symbol of prosperity and harmony.

The city's built fabric—from the grandeur of the City Palace to modest ghats—reveals an intimate dialogue with water and climate. In today's context of urbanization and ecological strain, Udaipur offers valuable lessons in sustainable design and contextual planning. Documenting its architecture through travel-based reflection helps students connect memory, space, and design thinking.

ABSTRACT

This paper examines the relationship between water and the built environment in Udaipur, often celebrated as the "City of Lakes." Based on a three-day academic visit, it highlights how lakes, ghats, palaces, and residential clusters shape urban form and cultural identity. Through experiential observations, sketches, and documentation, the study explores how architecture in Udaipur harmonizes with water, embodying lessons in sustainability, heritage conservation, and pedagogy. It also emphasizes the value of narrative-based architectural journalism as a teaching method, positioning Udaipur as a living classroom for students of architecture.



UDAIPUR, THE CITY AND ITS WATER

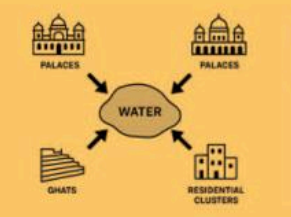
This paper, based on a three-day visit to Udaipur, attempts to capture these relationships through experiential observation and reflective writing. By narrating encounters with lakes, ghats, palaces, and everyday streetscapes, the study not only highlights architectural lessons in sustainability and heritage conservation but also demonstrates the pedagogical value of travel-based documentation. Positioned within the framework of Architectural Journalism, the reflections seek to inspire students to transform their own travel experiences into meaningful narratives that connect memory, place, and design thinking.

OBJECTIVES

1. To analyze the role of water in shaping Udaipur's urban and architectural character.
2. To document lakes, ghats, and palaces, extracting lessons in sustainability.
3. To link experiential travel writing with architectural pedagogy.
4. To present narrative documentation as a model for B.Arch students.

METHODOLOGY

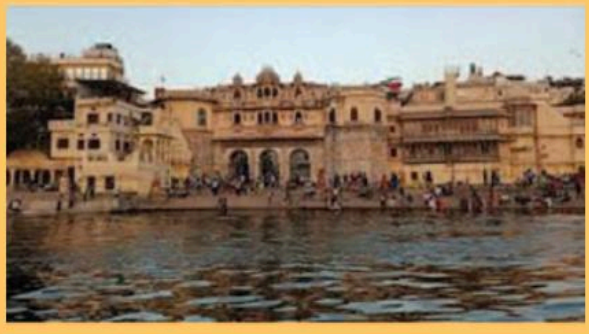
The study adopted experiential observation during a three-day academic visit. Walking tours, sketches, notes, and photography documented how water influenced circulation, siting, and daily activity. Observations were written in a narrative style, blending factual description with sensory impressions. Reflections were then analyzed through lenses of sustainability, heritage conservation, and pedagogy, and structured into teaching modules for students.



REFLECTIONS FROM THE VISIT

THE CITY AND ITS WATER

Udaipur unfolds as a manuscript of water-centered urbanism. Its lakes are cultural anchors, shaping rituals, markets, and monumental landmarks. Unlike modern cities where water is concealed underground, here it is celebrated as a living resource and a symbol of continuity.

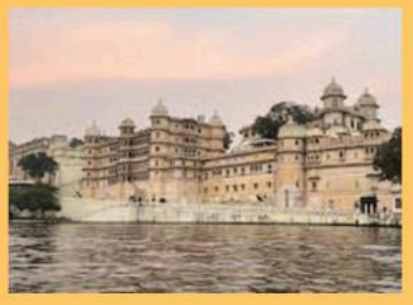


DAY 1 – FIRST ENCOUNTERS

At Gangaur Ghat, Lake Pichola mirrored the golden silhouette of the City Palace at sunset. The contrast between bustling bazaars and the meditative calm of the waterfront revealed a rhythmic relationship between movement and pause. This spatial sequencing illustrated how architecture slows down in harmony with water.

DAY 2 – PALACES AND GHATS

The City Palace rises from the lake's edge, framing vistas and asserting symbolic power. Jag Mandir, an island palace, reinforced the royal association with water. Ghats like Ambrai, however, told the story of everyday life—women washing, children diving, priests performing rituals. While palaces monumentalized water, ghats democratized it, teaching how architecture balances spectacle and the ordinary.



City Palace on Lake Pichola and Jag Mandir island palace, symbols of royal power over water.

Markets near Jagdish Temple reveal how water shaped daily commerce

DAY 3 – STREETS AND MARKETS

Markets near Jagdish Temple illustrated how water shaped daily commerce. Ritual shops and guesthouses clustered near ghats, while informal stalls spilled onto steps descending to the lake. Everyday interactions—an old man feeding pigeons, tourists photographing palaces—gave the city its living character.

ARCHITECTURAL ANALYSIS AND REFLECTIONS

Udaipur emerges as a laboratory of sustainable design. Ghats function as both social spaces and flood-control systems. Havelis display courtyards and jharokhas that ensure ventilation. Rainwater harvesting reveals ecological wisdom embedded in tradition.

Yet challenges are visible: unchecked tourism, encroachment, and commercialization strain the fragile ecosystem. This duality—timeless sustainability versus modern vulnerability—offers critical lessons for architects and policymakers.

TRAVEL WRITING AS PEDAGOGY

For me, this journey was not just about observation but about translating memory into narrative. Describing how dawn light painted the lake silver, or how the palace walls reflected moonlight, allowed me to connect architecture with sensory experience. This, I believe, is the essence of architectural journalism: to capture place as both fact and feeling. For students, such travel-based writing teaches how to merge observation with reflection, creating documentation that is not only academic but also deeply human. The aim is to show them that architecture is not frozen in drawings or data—it is lived, remembered, and narrated.

STUDENT LEARNING FRAMEWORK

1. Setting the Context – Note historical and cultural significance before analysis.
2. First Impressions – Record sensory details (light, sound, smell) as experiential cues.
3. Architectural Documentation – Combine sketches and photographs with written reflections.
4. Cultural Life – Observe how people animate architecture.
5. Analytical Reflection – Link design to sustainability and heritage lessons.
6. Personal Takeaway – Value memory and atmosphere as part of architectural understanding.

FINDINGS AND DISCUSSION

1. Water as Urban Determinant – Lakes dictated the siting of palaces, temples, and markets, offering lessons in integrating natural resources into urban growth (Fergusson, 1910; Anand, 2017).
2. Architecture as Mediator – Palaces symbolize grandeur, while ghats act as community centers, merging ecology with culture (Tillotson, 1987; Strang, 2004).
3. Sustainability in Tradition – Courtyards, jharokhas, and rainwater systems illustrate climate-responsive design (Michell, 1995; Agarwal & Narain, 1997).
4. Conservation Challenges – Tourism and commercialization threaten authenticity, highlighting the need for sensitive heritage management (Gupta, 2001; Datta, 2012).
5. Pedagogical Value – Narrative writing transforms site visits into lessons beyond geography, enriching architectural education (Weston, 2011; Ching, 2015).

CONCLUSION AND RECOMMENDATIONS

Udaipur demonstrates how water and architecture together create a cultural landscape. The city's ghats, palaces, and bazaars exemplify sustainable, user-centered design rooted in tradition. For students, it teaches three enduring lessons:

- Sustainability is a historic inheritance, not a modern invention.
- Architecture is incomplete without its users.
- Narrative documentation is a powerful academic tool.

Yet, Udaipur also warns of threats from uncontrolled tourism and commercialization, urging policies that balance development with heritage preservation. For students and practitioners alike, it remains a living classroom where memory, material, culture, and sustainability converge.

RECOMMENDATIONS FOR STUDENTS

1. Adopt narrative writing in site documentation—record what you feel, hear, and smell alongside what you measure and sketch.
2. Compare local experiences with global debates—link your site observations to themes like climate resilience, heritage conservation, or sustainable urbanism.
3. Practice empathy in architecture—observe how people use spaces and reflect on design's role in enabling social and cultural life.
4. See every site visit as a living classroom—even if you cannot travel far, start documenting your own neighborhoods with the same depth and sensitivity.

In essence, Udaipur teaches us that architecture is both memory and material, culture and construction, sustainability and symbolism. By learning to narrate these layers, you as future architects will not only design better spaces but also tell the stories that keep them alive.

HOW TO KEEP YOUR CUSTOMER HAPPY & CONTENT

AR. AKSHAY BHATT

Well, this is a tricky question and needs tackling with different approaches. Since all customers are not the same, there cannot be a universal magical trick to keep them happy or satisfied. Depending upon the type of products, services or supports developed, the ways to bridge the gap between the customer expectations and the business's offerings need to change. Also, each customer comes with a unique requirement or perspective; accordingly, the approach to handle each of them needs certain modifications.

Anyway, first things first! Let's understand, before moving further, about various categories of products and services that businesses develop for their target audiences.

Product Category

Finished Goods – These are industry-specific products, usually developed in a close and controlled manufacturing conditions. Such products are rolled out only after a series of quality checks to ensure adherence to performance commitment and compliance with industry standards, etc. Such products can be physically verified before buying.

Products under development –These products are mostly developed, while using the combination of various industry products. For example, residential and commercial projects in construction sector, where product is a building, a township or a commercial space.

Services provided by skilled professionals – This consumable comprises of services offered on the basis of skills. Whether it is production, operation, maintenance, repair or any kind of consultancy services, the skilled manpower or subject matter expert offers the expertise generated from experience and core education. The main aim of these services is to solve a problem faced by the customer.

Customer Satisfaction – THE COMMON ELEMENT

The new customers have limited understanding of the product. Thus, they rely more on the facilitator. Whereas, an informed customer is generally more drawn to the technicalities of the product, and want to find how the product has grown in terms of functionalities, etc.

Customer is the King: Irrespective of the size of order, or the knowledge level of the customers, the businesses need to treat customers like a King. Means, the businesses have the responsibility of creating truly customized and personalized customer experience by positioning the product in such a way that customers feel it is tailor-made for them. It is the universal factor that features all products and services categories.

CUSTOMER IS THE KING

In the present world, a happy customer becomes possible to achieve when the businesses have understood the need and have designed the product features accordingly. Further, the marketers' expertise in positioning the service or product in customer-centric way helps the businesses win the confidence that can translate into a long-lasting relationship ultimately.

In simpler words, more than the features it is the 'feel good' factor that sellers or service providers create with expertise and experience, which wins them the loyal, happy and content customers for a lifetime! Such relationships are based on inbuilt trust and credibility.

So, what makes any product or service the best fit for the customers? Well, the answer will be –professional attitude and behavior of touch point managers, their ability to assess and respond to customer needs and requirements, proper and adequate response to customer queries, and most importantly, their ability to make customer feel special, comfortable and well taken care of. All these abilities are sure to help close the deal while creating some value for all parties involved.

Customer Education/ Orientation: A customer is most likely to appreciate and understand the importance of any feature when he is educated adequately about the same in the most empathetic manner by the sales professionals. That is why, in the present world of cut-throat competition, businesses do not aim at becoming a seller; they strive to become a solution provider.

It points at the need of training the sales personnel so that they can provide every information the customer needs to bring clarity in the decision-making process. A sales or service copy, not written just like a routine ad, but like a revelation, is one of the most promising tools that can help customers feel not only satisfied but proud of being associated with the brand.

CUSTOMER EDUCATION

Solution Provider

Decision Making

Customer Understanding

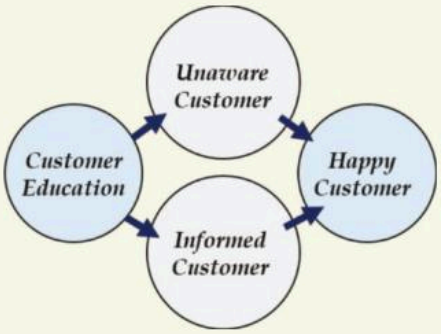
Knowledge

Product Utility

How to achieve a well-informed customer?

It all starts with reading of customer's understanding about the product and its utility. Businesses cannot expect to close a deal when they and their customers are not at the same page. In closing of any deal, the important factors that play crucial roles are – knowledge, interest and ultimately, utility.

When a customer is crystal clear on what he is looking for, at what price and for how long, sellers can close such deal the fastest.



Also, in the second case, where the customer has not understood the purpose of the purchase and is not capable of relating to the features, he is most likely to come back fuming, holding the seller or representative responsible for pitching in the wrong product. So, the second most crucial aspect of a successful deal is a well-informed customer given the correct and detailed information, which is neither over-promised nor under-delivered. Right from the product development and delivery, to after sales and customer service, there has to be a uniformity in the way of dealing with the customer. This is what we refer to as brand voice or personality also.

SOME MUST-DOS FOR ACHIEVING A HAPPY AND SATISFIED CUSTOMER

Make a Checklist: The next important part is the list of requirements and expectations of customers. The very first interaction with the customer enables any service or sales personnel to read and to make a note of customer requirements in the form of detailed checklist. During delivery, it is important to ensure that all relevant requirements and expectations of the customer are fulfilled as per compiled checklist.

Face of your Service or Sales: It is important to note here that most of the times, the customer is comfortable with only one person in any deal and others play a supportive role only. That service or sales personnel becomes the face of the deal or organization. He is the only one who is instrumental, while marketing the product or service to customer by understanding his requirements correctly.

Keep in touch: This is the most important thing for any sales person or service personnel. Always keep in touch with customers even after the deal is done.

Therefore, it is advisable for a sales person to give at least one or two courtesy calls to customers post sales of the product. If you have noticed, many domestic and international companies follow this practice to retain their customer base and thereby, enhance their future business relationship.

Feedback and Recommendations: It is another important thing to ask a customer. Always take the feedback of the final sale or service quality.

Please note that the relevant questions makes a big difference while asking for a feedback. Also, it helps to assess the real customer experience.
Further, to make the best of the fresh experience created, ensure that after sale or service feedback call is utilized to grow network.

CUSTOMER SATISFACTION

Customer is the King

Customer Education

Make a Checklist

Face of your Service or Sales

Keep in Touch

Feedback and Recommendations

SELLING THE PRODUCT – NOT JUST A PROCESS, BUT THE START OF A RELATIONSHIP

While selling any product, the sales person is the first touch point of the company. Thus, in order to make the first impression correct, performance of Sales person becomes very critical for the overall success of product selling process.
Important factors for Effective selling
Performance measurement: In most of the international stores, the performance measurement of sales person is not assessed on the basis of the final sale of the product. In fact, it is assessed on how the deal is closed and subsequent achieving of customer satisfaction. These stores of international reputation have the policy of `never knowingly under sold'. Means, price is an outcome of intelligent pricing strategy finalized after competitor study.
Healthy Pricing: So, for every product or sales person or store performance, healthy pricing is a must. This healthy pricing is nothing but a competitive price offered to the customer. This aggressive pricing, where margin is reduced, is not by fluke, but is an outcome of strategic collaboration with various behind-the-scene entities, such as retailer, distributor, wholesaler, and manufacturer and supplier.
Customer Dealing: Most of the successful deals are an outcome of impulse buying behavior of the customer.
However, even these customers review their decisions over a period of time post the purchase. So, even when cashing on the impulsive buying behavior, the sales person should stick to suggesting the right product only to customer in the very first meeting.
Rest assured, if sales person has understood his customer's preferences right and has bid correctly, the sale is sure to happen, sooner or later.

Post Purchase Updates: Often it is seen that sales personnel follows up the customer aggressively till the product is not booked or advance is not received. This is very unhealthy practice and should be altogether avoided and as a good practice, post purchase updates should be shared diligently with the customer until the product does not reach the customer's hands.

SELLING THE PRODUCT

Performance Measurement

Healthy Pricing

Customer Dealing

Post Purchase Updates

SERVICE INDUSTRY CUSTOMERS

As a service provider or a consultant, the only way to encourage subscriptions or hiring of service by the customers is to make him happy with exceptional services quality. In reality, the best quality service is an outcome of the continued committed work, and a service framework working well in accordance with the customer requirements. So, a detailed customer brief encompassing all essential offerings of the service explained in a customer-centric way gives the utmost satisfaction and happiness to customers.
If product industry sales performance is mostly led by interpersonal skills of team or team personnel's performance in a pre-defined process or system, the service industry is dependent on individual's technical skills.
To conclude,
If the product or service is conventional type, it is the positioning of the product or service according to consumer perception that can make the difference. And, if this change in perspective or outlook is developed from the interaction with the service provider, half of the battle in terms of achieving a happy, loyal and satisfied customer is already won...

Glass safety in buildings and Architects

AR. AMIT DWIVEDI

(Article is designed especially for curious and energetic architects)

Glass has been used in building industry since ages, though it was used limited in this part of the world till late 1980's (because the climatic conditions); masters of modern architects have used in abundance in colder countries (be it Mies van der rohe, Le Corbusier, Louis I Kahn and many others) to trap the heat inside and save on energy.

Now, in today's era, with globalisation, advance of technology, its reach and most importantly the aspirations of the clients the use of glass has increased significantly in the building industry India; from façade to interiors everywhere and we cannot avoid using glass in today's scenario for various obvious reasons like better "aesthetics", "visual connectivity" with outdoor environment, better "daylight" and most importantly 'faster execution' of the façade. And no going back from here, so it is important for all of us to understand the basic safety measure to be taken care of.

Govt agencies and Indian standards have brought up newer codes like NBC 2016, IS: 2553(Part-1):2018, IS 3548(1988) for use of glass to make environment safe and sustainable, apart from international codes. And life safety is foremost thing for any material being used and sustainability at the second place and budgeting in the last.

Here are few criteria about the glass strength

Annealed (normal glass) Strength 'X' risks level- high (easily breakable due to less strength and breaking pattern sharp and bigger pieces).
Heat strengthened glass – Strength 2 'X', risk level (stronger than annealed but breaking pattern sharp and bigger pieces).

Tempered/ toughened glass- Strength 4 'X', risk level (Less, does not easily breaks, when breaks shattered in less sharp and small pieces, it also has tendency of self blasting to concentration of impurities of nickel sulphide at one point during the process of tempering/ toughening process, so another process called heat soaking can minimise this problem of self blasting of the glass.

"To overcome safety issues the glass facades must comply with right wind velocity/ forces, right thickness of the glass, maximum glass pane sizing, human impact criteria and supporting framework etc. "

Tempered glass has more undulations during the process, hence designers were avoiding use of the same in façade before 2016, though a few are still avoiding.

One can imagine if a glass breaks at a height and even indoors due to any reasons how risky it may become if falling from a height and the first two categories will be like a big kite falling. And even small pieces of toughened glass may become reason for fatal injuries.

Safety lamination films can be used to overcome the issue of falling of broken glass but the same may not encourage due to budget factors until stringent guidelines are in place.

Glass used indoors for partitions where impact is possible and users are very close by and shower enclosures, railings skylights are also very crucial for life safety. Toughen glass must be taken in all uses and laminate the glass especially for railings, skylights and shower enclosures (preferred) if used without a frame.

When it comes to patterned glass which are in tend again now a days, only fluted patterned glass can go under toughening process.

Although glass adds zero VOC- 'volatile organic compounds' emission in the environment and recycling of broken raw material, there are riders associated with glass to make energy efficient and sustainable environment in warmer countries like India and important factors while glass selection will be Heat gain (direct SHG and indirect U-Value), visibility – VLT-'visual light transmission' (more visibility comes with more heat gain), sound reduction between outdoors and indoors. Certifications (like EPD and HPD and others) related to sustainability may also be checked with manufacturer.

"Glass is very good material, especially when it comes to meeting aspirations and need of inside out connectivity also in providing sound insulation. And this should be used with care and right selection."

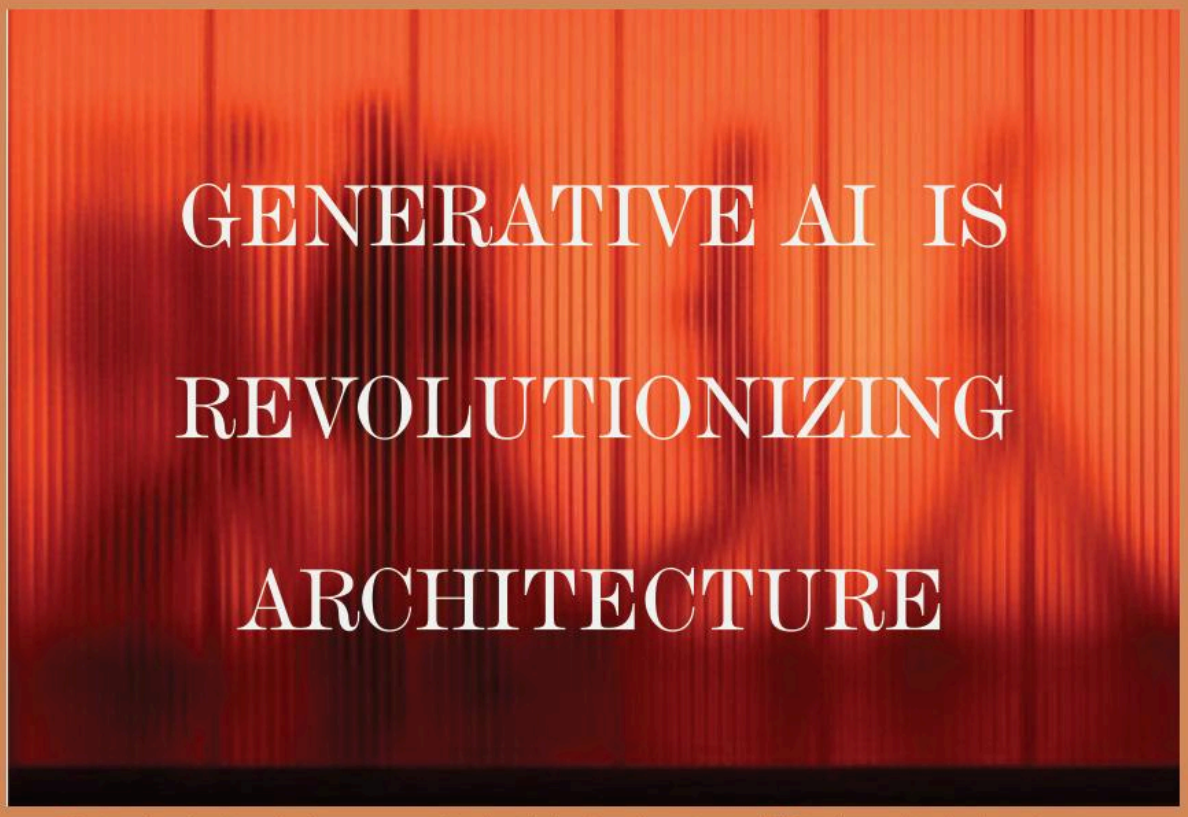
HOW GENERATIVE AI IS SHAPING THE FUTURE OF ARCHITECTURE DESIGN

AR. AMRISH JAIN



By transforming how designs are conceived, optimized, and constructed. This advanced technology leverages computational algorithms and machine learning to autonomously generate design solutions based on data input, such as spatial requirements, building codes, and environmental conditions. The result is a faster, more efficient, and sustainable design process, enabling architects to explore diverse possibilities and optimize performance.

Accelerating Design Ideation

Generative AI accelerates the design process by allowing architects to rapidly explore a wide array of design alternatives. Tools like Autodesk Generative Design and Spacemaker AI generate thousands of optimized solutions based on user input, such as site conditions, budget, and energy goals. This rapid ideation empowers architects to explore unconventional forms and geometries that may not have been conceived through traditional methods, speeding up decision-making and improving creativity.

Optimizing Performance and Sustainability

Sustainability is a critical aspect of modern architecture, and Generative AI plays a key role in ensuring energy efficiency and environmental responsibility. AI can analyze environmental factors like sunlight, wind, and temperature to optimize building layouts, ensuring maximum natural lighting and ventilation while reducing reliance on artificial systems. It also helps select sustainable materials and reduce a building's carbon footprint by simulating material usage and long-term environmental impact.

Automating Repetitive Tasks

AI automates time-consuming tasks, such as ensuring code compliance and performing clash detection between architectural, structural, and mechanical systems. This reduces human error and accelerates project timelines. Integrating with Building Information Modeling (BIM), AI generates drawings, calculates material quantities, and updates schedules, improving efficiency and reducing costly errors.

Enhancing Human-Centered Design

Generative AI allows for more human-centric design by responding to occupant needs. AI can recommend layout changes to improve flow and comfort, optimizing spatial configurations and adjusting environmental factors like temperature and lighting in real time. This creates adaptable environments that prioritize well-being and productivity.

Streamlining Construction

AI is also making construction more efficient. Robotic systems powered by AI can 3D print building components or assemble structures, ensuring precision and reducing labor costs. Additionally, AI can optimize construction logistics by predicting material needs, labor requirements, and potential delays, helping keep projects on track.

Post-Occupancy Adaptation

Once a building is completed, AI continues to play a role. Post-occupancy data allows AI to monitor performance and suggest adjustments for energy efficiency or comfort improvements. Smart buildings can autonomously adjust environmental factors like lighting and heating based on occupancy, ensuring ongoing optimization.

Conclusion

Generative AI is reshaping architecture by enabling faster, more sustainable, and innovative design processes. By automating complex tasks, optimizing performance, and responding to user needs, AI is enhancing both the design and construction phases. As technology advances, the future of architecture will become more adaptive, sustainable, and human-centered, offering limitless possibilities for architects and building occupants alike.

AR. AMRISH JAIN
2000 BATCH

Amrish has always been fascinated by how technology can inspire creativity and transform the way we live and work. His curiosity led him to the United States, where he earned a Master's degree in Computer Science and began a journey helping organizations—both in the public and private sectors—embrace innovation through technology.
Today, Amrish serves as a Principal Director at Accenture.

BIM IN INFRASTRUCTURE: ACC Collaboration, VR, and Digital Twins

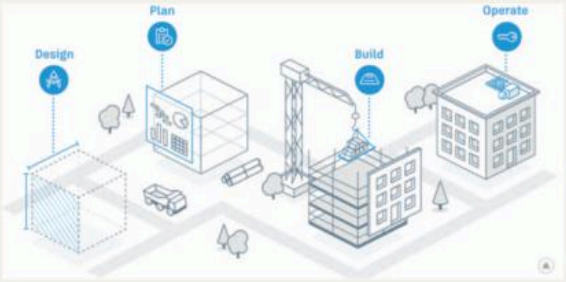
AR. CHANDRA SHEKHAR SINGH

INTRODUCTION

The infrastructure sector is experiencing a digital transformation, with Building Information Modeling (BIM) at its core. The integration of cloud-based design collaboration, immersive VR model coordination, and digital twin applications is redefining how teams design, coordinate, and operate complex infrastructure projects.

ACC COLLABORATION: A CONNECTED DATA ENVIRONMENT

Modern BIM workflows leverage cloud-based platforms such as Autodesk Construction Cloud (ACC) for design collaboration and model coordination. These platforms provide a common data environment where all project stakeholders can co-author, review, and manage design data in real time. Key features include federated model coordination, automated clash detection, and issue tracking, which ensure that interferences are resolved early and costly rework is minimized. Standardized workflows and templates in ACC help maintain consistency and scalability across projects.



Autodesk Construction Cloud is best-in-class software built for simplicity and power – uniting office and field teams from design through to planning, construction and operations. [Image Credit: Autodesk]

MODEL COORDINATION WITH VR HEADSETS: IMMERSIVE COLLABORATION

The adoption of virtual reality (VR) headsets such as Oculus Quest, is transforming model coordination and design review. By integrating BIM models with VR platforms Autodesk XR, teams can conduct immersive, multi-user design reviews. VR meetings allow participants to identify constructibility issues and potential RFIs more efficiently than traditional 2D or even 3D desktop reviews. Stakeholders can virtually 'walk through' facilities at a 1:1 scale, providing feedback on equipment layout, safety, and accessibility before construction begins. VR also enables geographically dispersed teams to collaborate in real time, improving communication and buy-in from all stakeholders.

Virtual reality model review session [Image Credit: WSP Thornhill, ON Canada]

DIGITAL TWIN APPLICATIONS: BRIDGING DESIGN AND OPERATIONS

Digital twins—dynamic, data-rich digital replicas of physical assets—are the next frontier in infrastructure management. By linking BIM models with real-time data from sensors and IoT devices, digital twins enable continuous monitoring, predictive maintenance, and optimized asset performance. Owners and operators can visualize, simulate, and analyze infrastructure performance throughout its life cycle, from design and construction to operation and maintenance.

LESSONS LEARNED AND BEST PRACTICES

Standardization is key: Establishing standardized workflows and templates in ACC ensures consistency and scalability across projects.

Early stakeholder involvement: Engaging end users and O&M staff during the design phase, especially through VR workshops, leads to better outcomes and fewer change orders.

Continuous training: Ongoing training on ACC, BIM, and VR tools is essential to maximize their value and keep teams aligned with evolving best practices.

Conclusion

The convergence of BIM, ACC Design Collaboration, VR model coordination, and digital twin technology is unlocking unprecedented value in infrastructure projects. By embracing these innovations, organizations are not only enhancing project delivery but also setting new benchmarks for operational excellence and sustainability.

AR. CHANDRA SHEKHAR SINGH
2000 BATCH

MANAGER – DESIGN SERVICES, WSP CANADA
Chandra Singh is a Manager – Design Services with extensive experience in BIM implementation across infrastructure projects. He specializes in digital collaboration, immersive design review, and lifecycle asset management.

ROLE OF FINANCIAL INSTITUTIONS IN HOUSING FINANCE

DR. ARUN KUMAR RANA

ABSTRACT

Housing finance is a critical component in facilitating home ownership and promoting economic development. As the global population grows and urbanization accelerates, the demand for affordable and adequate housing continues to rise. However, limited personal savings and rising real estate prices create a significant affordability gap. Financial institutions ranging from commercial banks and housing finance companies to microfinance institutions and development finance agencies play a pivotal role in bridging this gap by mobilizing capital, providing structured credit solutions, and supporting both individual borrowers and housing developers. This paper explores the key functions of financial institutions in housing finance, examines the types of institutions involved, evaluates their impact on housing accessibility and affordability, and highlights the major challenges they face. Through this analysis, the paper also discusses the future direction of housing finance, including the integration of technology, expansion of green housing finance, and the importance of public-private partnerships in building sustainable housing ecosystems.

INTRODUCTION

Access to housing is universally recognized as a basic human right and a fundamental component of human welfare. In developing and developed economies alike, the housing sector contributes significantly to GDP, employment generation, and social stability. However, home ownership is often impeded by the high cost of property, land, and construction. For most individuals, especially in low- and middle-income groups, external financial assistance becomes essential.

Financial institutions play a vital role in meeting this need by offering a range of housing finance products and services. These institutions not only support home buyers with loans and credit facilities but also assist developers, governments, and other stakeholders in financing housing-related infrastructure and services. As such, their role extends far beyond mere lending; they act as facilitators of economic development and social equity.

WHAT IS HOUSING FINANCE?

Housing finance refers to any form of financing that facilitates:

- Purchase of residential property
- Construction of a new house
- Improvement, renovation, or extension of existing homes
- Refinancing of an existing housing loan

Housing finance is not limited to individuals. It also includes:

- Financing for real estate developers to build residential projects.

- Funding for infrastructure development related to housing (roads, water, power).

- Government schemes that support affordable housing and slum rehabilitation.

Types of Financial Institutions in Housing Finance

Commercial Banks
Commercial banks provide a wide array of housing finance solutions, including retail home loans and construction finance for developers. They typically cater to salaried individuals and businesses and offer competitive interest rates with flexible tenure options.

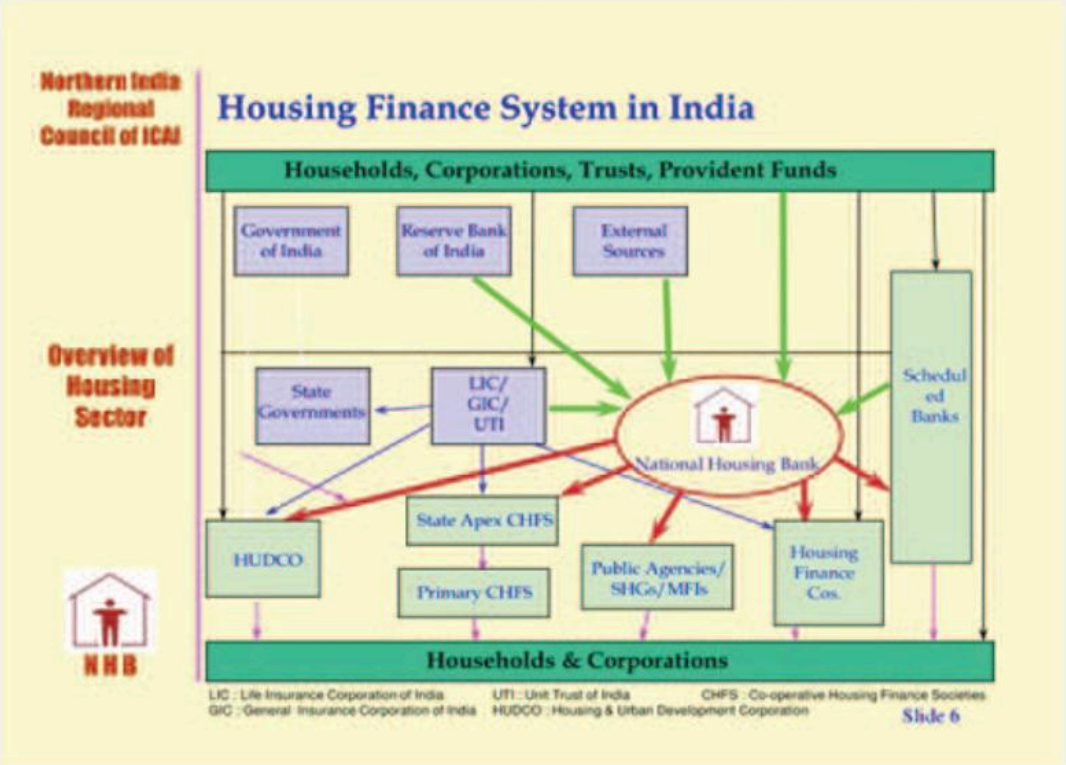
Housing Finance Companies (HFCs)
HFCs specialize in housing finance and often operate with greater flexibility than commercial banks. In countries like India, HFCs such as HUDCO, HDFC Ltd and LIC Housing Finance, SBI Housing etc focus on low- and middle-income borrowers, playing a key role in deepening housing finance penetration.

Non-Banking Financial Companies (NBFCs)
NBFCs extend credit to borrowers in semi-urban and rural areas who may lack formal income documentation. These institutions often cater to non-salaried and self-employed individuals, thereby enhancing financial inclusion.

Microfinance Institutions (MFIs)
MFIs focus on serving low-income households and informal sector workers. They provide small housing loans, typically for incremental construction or home improvement. MFIs operate in underserved regions and often partner with NGOs.

Co-operative Banks and Credit Societies
These member-owned institutions offer housing loans at community level, especially in rural and semi-urban regions. Their strength lies in trust-based lending and local knowledge.

Development Finance Institutions (DFIs)
DFIs like the National Housing Bank (India), Shelter Afrique (Africa), and Fannie Mae (USA) support housing finance by offering long-term capital, refinancing, and credit guarantees. They work closely with governments to promote affordable housing initiatives.



Key Roles of Financial Institutions in Housing Finance

Capital Mobilization
Financial institutions collect savings through deposits and investments and deploy these funds as home loans, thereby ensuring a continuous capital flow into the housing sector.

Provision of Housing Credit
They assess borrowers' income, creditworthiness, and property value to offer appropriate housing finance solutions such as home loans, construction loans, and refinancing options.

Risk Management
Through proper underwriting standards, collateral evaluation, and insurance mechanisms (e.g., mortgage insurance), institutions manage credit risk and ensure financial stability.

Promoting Financial Inclusion
By offering tailored loan products and simplified documentation processes, especially through HFCs and MFIs, financial institutions reach marginalized groups, including informal workers and rural populations.

Supports for Affordable Housing
Financial institutions partner with governments to implement schemes such as Pradhan Mantri Awas Yojana (India) and FHA loans , providing subsidized credit and down payment assistance.

Market Development and Liquidity
Institutions create mortgage-backed securities (MBS) to raise capital and support the secondary mortgage market, thus improving liquidity and access to long-term housing finance.

Financial Literacy and Counselling
Many institutions offer customer support, credit counselling, and financial education to promote responsible borrowing and reduce default rates.

Challenges Faced by Financial Institutions in Housing Finance

CHALLENGE	DESCRIPTION
Credit Risk	High default rates, particularly among low-income and informal borrowers
Title and Legal Issues	Lack of clear property titles affects collateral reliability
Affordability Constraints	Rising housing costs make ownership difficult despite credit availability
Regulatory Burdens	Institutions must comply with complex regulatory frameworks and provisioning norms
Interest Rate Volatility	Fluctuating rates impact both lenders' returns and borrowers' repayment capacity
Urban Infrastructure Gaps	Inadequate urban planning limits housing project feasibility

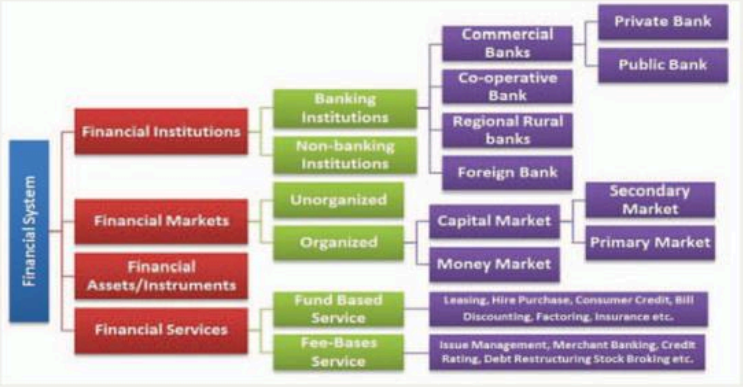
Future Prospects and Innovations

Digital and Fin-tech Innovations
The adoption of technology in housing finance is improving accessibility through digital on boarding, AI-based credit scoring, and online loan disbursal.

Green Housing Finance
Financial institutions are introducing green loans for eco-friendly homes and energy-efficient construction, aligning with sustainability goals.

Public-Private Partnerships (PPP)
PPP models are increasingly used to finance large-scale housing projects, particularly in urban affordable housing segments.

Secondary Mortgage Markets
The growth of mortgage securitization and development of housing bonds are expected to increase capital availability for housing finance.



Conclusion

Financial institutions play an indispensable role in enabling home ownership and promoting housing development. Their impact spans across capital mobilization, credit provision, risk management, and policy implementation. Despite facing regulatory, operational, and socio-economic challenges, they continue to evolve by embracing technology, promoting inclusive lending practices, and partnering with governments and international agencies. Moving forward, strengthening the institutional framework and ensuring policy support will be critical in expanding housing finance and achieving universal housing access.

Financial institutions are not just lenders, they are catalysts in the housing ecosystem. Their role spans across capital mobilization, credit provision, risk management, and social inclusion. As urbanization and population growth continue to drive demand for housing, the contribution of financial institutions in shaping inclusive, affordable, and sustainable housing will remain indispensable. Ensuring the right policy support, technological adoption, and risk mitigation strategies can make housing finance more robust and accessible to all segments of society.

MASS TIMBER -
INDIAN VISION CHALLENGES AND OPPORTUNITIES

AR. (PROF) ANURAG KHANDELWAL
AR. RUJUTA CHAUHAN

ABSTRACT

India stands at a critical juncture. Urban centers expand rapidly while the nation commits to net-zero emissions by 2070, forcing the construction industry to fundamentally reconsider building methodologies. Carbon emissions transcend environmental rhetoric, becoming quantifiable business assets. Carbon credits now trade as real commodities, transforming climate change from existential threat into substantial business prospect across developing economies.

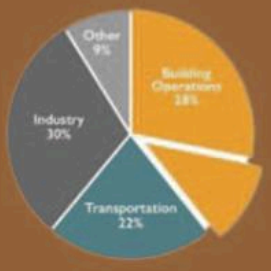
Buildings and construction represent the largest pollution source, accounting for roughly 45% of total carbon footprint,exceeding transport and manufacturing sectors. Simultaneously, this industry presents the greatest opportunity for environmental restoration through sustainable practices and carbon credit generation.

Traditional concrete and steel materials carry massive environmental costs. Globally, Mass Timber, specifically Cross-Laminated Timber (CLT), replaces these materials, enabling faster, durable, environmentally conscious construction with carbon-positive outcomes. India faces immense growth driven by its vast population and the world's largest rural-urban migration. This creates enormous housing and infrastructure demand, challenging the construction sector to meet sustainability requirements while fulfilling SDG commitments.

Carbon credits and environmental accounting through mass timber will drive adoption in India's near future. Regulatory acceptance emerges with BIS Standards and CPWD guidelines. Unlike softwood-reliant nations, India's extensive eucalyptus plantations—locally sourced hardwood—could transform construction. Yet this transition isn't simple.
Regulatory landscapes remain unclear, technical obstacles persist, and industries resist change. Nevertheless, benefits are substantial. Properly executed, eucalyptus CLT could advance climate goals, revive rural economies, and modernize construction. This transcends substitution—it re-imagines India's future infrastructure. The necessity of this transformation is undeniable; the question is whether stakeholders and policymakers are ready to implement effectively.

CROSS LAMINATED TIMBER

GLOBAL CO2 EMISSION BY SECTOR



BUILDING MATERIALS AND CONSTRUCTION 11%

Introduction

India's construction boom threatens to lock in decades of high-carbon infrastructure. With urban population projected to reach 600 million by 2031, the sector's 40% share of built environment emissions presents both challenge and opportunity. Traditional materials, cement (8% of global CO_2) and steel (7%), dominate Indian construction, creating significant decarbonization pressure.(World Economic Forum May 8, 2025)

Mass timber technologies offer a paradigm shift. CLT stores approximately 0.8 tons of CO_2 per cubic meter while delivering 75% lower embodied energy than steel-concrete alternatives. However, global success has concentrated in softwood-dominant regions (North America, Northern Europe), leaving hardwood-rich countries like India seeking locally adapted solutions.

BENEFITS OF MASS TIMBER

CARBON STORAGE

EMISSIONS DISPLACEMENT

FOREST MANAGEMENT

IMPROVED CONSTRUCTION

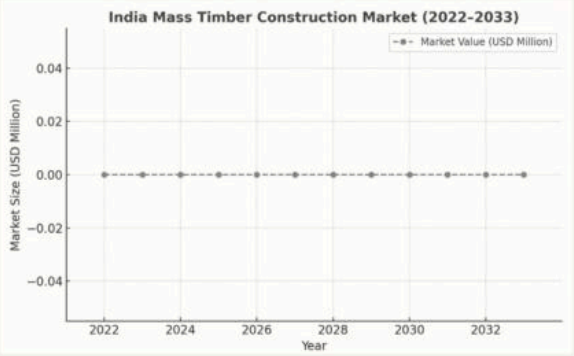
WORKFORCE GROWTH

WASTE MANAGEMENT

GLOBAL CONTEXT AND LESSONS

Mass timber's evolution from experimental technology to mainstream construction offers instructive lessons. Austria and Germany pioneered CLT in the 1990s, followed by Nordic innovations and North American scaling. Today's landmark projects, including Norway's 85m Mjøstårnet and Canada's 53m Brock Commons, demonstrate structural feasibility at unprecedented scales.

These successes share common enablers: abundant softwood resources, mature forest certification, standardized building codes, and robust research-industry partnerships. The softwood paradigm (spruce, pine, fir) optimizes for lower density (400-500 kg/m³), predictable grain structure, and established processing techniques, advantages unavailable to hardwood-dominant regions.



INDIA'S UNIQUE CONTEXT

BARRIERS TO ADOPTION

India encounters distinct obstacles in mass timber implementation:

Regulatory constraints: The Indian Forest Act (1927) enforces stringent state oversight of forest resources, demanding intricate permissions even for plantation timber. State-level transport regulations differ markedly, creating supply chain fragmentation and deterring private investment.
Technical limitations: Commercial CLT production facilities remain absent. Engineering programs seldom incorporate timber design principles, with a 2022 survey revealing under 15% of architectural practices possessed structural timber expertise. Quality benchmarks stay underdeveloped.
Cultural perceptions: Timber associates with temporary or rural construction, whereas concrete and steel represent permanence and progress.

OPPORTUNITIES

Beyond obstacles, India holds considerable advantages:

Plantation resources: Exceeding 7 million hectares of plantation forests, with eucalyptus spanning 2 million hectares, ranking globally second after Brazil.
Economic potential: Plantation timber processing could boost rural earnings while advancing government development objectives.
Policy alignment: Mass timber directly advances India's NDCs under the Paris Agreement, encompassing forest cover expansion and emission intensity reductions.

EUCALYPTUS CLT: PROMISE AND CHALLENGES

WHY EUCALYPTUS?

Eucalyptus offers the strongest rationale for Indian CLT development:

Abundance: Rapid rotation cycles (6-10 years) enable swift scaling across varied agro-climatic regions.
Superior properties: Research demonstrates eucalyptus CLT achieving 20-30% greater strength than spruce CLT, with modulus of elasticity reaching 14,000-16,000 MPa versus 12,000 MPa for softwood alternatives.
Economic efficiency: Reduced transportation distances lower embedded carbon while fostering local development.

Technical Challenges - Nevertheless, eucalyptus demands focused innovation:

High density (600-800 kg/m³): Elevates costs and complicates processing compared to 400-500 kg/m³ softwoods.
Dimensional instability: Up to 12% radial shrinkage during drying creates warping and delamination.
Bonding difficulties: Elevated extractive content undermines adhesive performance, requiring specialized systems.
Durability concerns: Vulnerability to decay and termites necessitates compatible preservation treatments.

Research Solutions -
International research provides promising developments:
Brazil's EMBRAPA created hybrid panels combining eucalyptus faces with pine cores
Australia demonstrated 40% enhanced bonding through plasma surface treatment
Spain optimized drying schedules reducing dimensional instability

These innovations indicate eucalyptus CLT viability but require localized research for Indian conditions.

MARKET OPPORTUNITIES

Priority applications should leverage mass timber advantages:
Affordable housing: Government programs like Pradhan Mantri Awas Yojana could benefit from prefabricated construction reducing delivery time and costs.
Educational facilities: Schools represent ideal applications for healthy indoor environments while serving as demonstration projects.
Industrial buildings: Warehouses and factories can leverage construction speed and design flexibility.
Economic impact potential includes direct employment (200-300 per facility), upstream forestry jobs (1,000+), and export opportunities across Asia, Middle East, and Africa.

Conclusion

Mass timber embodies a comprehensive approach to sustainable development, harmonizing economic expansion with environmental responsibility. For India, eucalyptus CLT presents a route to decarbonize construction while bolstering rural economies and establishing global leadership in hardwood mass timber technologies.

Carbon credit stewardship becomes equally crucial in this transformation. Each eucalyptus CLT building generates verifiable carbon sequestration, creating tradeable environmental assets. India must develop robust accounting frameworks ensuring transparent credit generation, avoiding double-counting, and establishing credible monitoring systems. Responsible carbon credit management protects market integrity while maximizing economic benefits from sustainable construction practices.

Achievement demands synchronized efforts: policy modifications releasing plantation timber potential, research funding addressing technical obstacles, and market cultivation developing professional capabilities. With urbanization intensifying and climate obligations strengthening, opportunities for establishing sustainable alternatives diminish quickly. India holds essential foundations: plentiful resources, expanding expertise, strengthening policy backing. What persists is institutional commitment to convert aspirations into achievement. Eucalyptus CLT, adequately supported, could access trillion-dollar prospects while advancing climate and development goals concurrently. The question isn't whether India can manage this investment, but whether it can manage avoiding this transformative approach to sustainable construction.

NOTES:

Carbon Benefits of Mass Timber
Carbon Storage: 1 m³ timber stores ~0.9 tCO_2.
- 10,000 m² building (~6,000 m³ timber) stores ~5,400 tCO_2.
- Avoided emissions vs steel/concrete = 3,000–4,000 tCO_2.

Total ~9,000 tCO_2 per building.

Why Mass Timber Matters in India
India must build 700–900 million m² annually till 2030.
Conventional cement & steel = 40% of building sector CO_2.
Mass Timber = carbon-negative alternative.

Future Outlook – Mass Timber & CreditsCarbon Storage Potential

MY VILLAGE – WHERE WE WENT WRONG

DR. HARISH TRIPATHI

The 21st century has seen a growing focus on energy efficiency, from global to local levels. Sustainability has become a key concern, especially in urban India. However, this shift has been largely top-down, often neglecting India's villages, where 60% of the population resides. We can't discuss India without considering the unique needs of its villages, rather than applying urban solutions. A more nuanced approach is needed to address the country's diverse contexts.. In India, context and circumstances continuously change—Kos Kos Pe Paani Badle, Char Kos Pe Baani.

I grew up in Gaura, a small village near Sultanpur, Uttar Pradesh, where electricity was absent. Yet, I vividly remember never feeling its absence due to our ecosystem. Our daily routines didn't rely on electricity. We used hand fans to cool ourselves during hot summer afternoons and slept under the stars after sprinkling water on the terrace.

We followed a natural rhythm, eating and sleeping early, and working in the fields with the rising sun. Winters meant gathering around the fireplace, and school classes were held outdoors under the warm sun. Our lives were in harmony with nature, and our comfort didn't depend on electricity or any other form of energy

The organization of Gaura was organic and poly-directionally incremental, comprising four interconnectedPurwas (hamlets) spaced apart, surrounded by Khet (farms) and Bagias (orchards). A typical house complex within these hamlets included the main house, Duar (front yard), Saria (animal shelter), Ped (tree), and Kuwan (well). Notably, there were no boundary walls or shared walls, only a 3 ft. Kolia (lane) serving multiple purposes. Houses often faced each other, with thresholds used for social interactions, fostering daily exchanges and intimacy as people could easily converse with neighbors

sitting in front of their homes.

Most houses in the village were Kaccha (raw) constructions, designed around a central courtyard, with thick mud walls (approximately 1 Gaj or 3 feet) and sloping roofs covered with Khaprail (terracotta tiles). The spatial organization was both climatically responsive and socially adaptive. Additional features included an Osaara (thatched verandah) at the front and a multi-utilityJhopari (thatched hut). Many houses had a nearby saria to shelter animals like cows, buffaloes, and oxen, which were considered part of the family. Family members shared responsibilities for their care, with bulls used for ploughing fields and cows and buffaloes providing milk. We would collect gobar (cow dung), store it away from the house, and after a year, it would become Khaad (manure) for our fields.

Outdoor living was an integral part of daily life. During scorching summer days, people would gather under the cooling shade of Neem or Mango trees, leveraging nature's respite. Each season brought its unique comfort systems, minimizing reliance on energy-intensive solutions. People's lifestyles and expectations harmonized with natural rhythms, fostering a symbiotic relationship with the environment. Their needs were modest, and their endurance was remarkably greater than what we witness today. This innate connection with nature allowed them to thrive in a world where simplicity and sustainability were woven into the fabric of everyday life.

This traditional form of habitation also supported a seasonal economy, where skilled craftsmen like Nirahu were renowned for crafting Khaprail (roof tiles). These tiles were typically produced by the village Kumhar, who also created everyday earthenware for household use, weddings, and festivals like Diwali. The tiles were reusable and often sold to those building new homes. The roof system incorporated wooden Kari, Patra, Sarpat, and Mitti. Many houses featured a Duchhatti—a wooden loft constructed from Kari and Patra—used for storage purposes, showcasing the resourcefulness and craftsmanship of the community.

The mud walls were expertly constructed, while the Chhappar (thatched roofs) were made from Baans (bamboo) and Sarpat grass, built collectively by villagers through a system of mutual support. It was an unspoken understanding that if you didn't help others with their Chhappar, they wouldn't assist with yours.

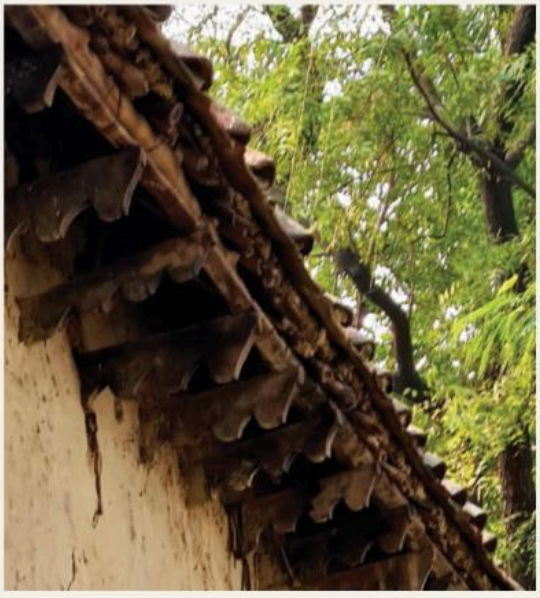
This reciprocal arrangement ensured active participation throughout the year. Locally sourced materials like Sarpat, Neem,Aam, and Sheesham were used, with trees being felled in advance for construction purposes. Remarkably, almost no materials needed to be brought in from outside, thanks to the skills of local artisans like the Lohar (blacksmith), Kumhar (potter), and Badhai (carpenter), who could produce everything required.

However, times changed, and the aspiration for a Pukka (permanent) house became widespread, symbolizing stability and affluence. Walls became thinner, reducing from one-and-a-half bricks thick to just a single brick. Some villagers began owning Bhatthas (brick kilns), and cement, once rationed, was sold on the black market. Due to tight budgets, houses were rarely plastered on the outside, and terraces lacked proper insulation, often featuring just a thin plaster coat. These homes turned into heat boxes, losing their earlier climatic responsiveness. With financial constraints, courtyards disappeared, and the Osaara, once a

vital buffer zone, vanished as every space was enclosed and "utilized." The introduction of tractors made bullocks redundant, leading to a decline in traditional ploughing practices. Consequently, the Saria, once an essential part of every household, began to disappear, and even the practice of keeping cows and buffaloes declined over time.

Urea and pesticides were introduced, heavily promoted by the government to boost crop yields. However, the soil faced immense pressure. The village was electrified, but with limited power supply, fans became common, trapping heat. Electric heaters replaced the alaav in winters. Recently, the first air conditioner was installed, and I worry about the impact on per capita emissions. The Gadahi (ponds) near Kaccha houses have disappeared, and everything is now Pukka. Boundary walls have been built, and disputes over Naali (drains) and Rasta(access) have become common.

Village roads, once designed for bullock carts, now accommodate cars. Urban lifestyles have influenced villagers, who now aspire to live like city dwellers. Traditional attire likeKurtas and Dhotis are reserved for festivals, replaced by Jeans and T-shirts. Sustainable practices have given way to unsustainable choices in



construction, clothing, and lifestyle. Community-driven events, like weddings, were once managed collectively, but now caterers handle everything. These rapid changes went unnoticed, but after years, I struggle to recognize the village I knew - a self-sufficient, resilient, and sustainable community. The built environment's transformation extends beyond physical structures, reshaping people's thinking, society, aspirations, and dreams.

PROGRESS HAS REACHED MY VILLAGE, BUT WHAT'S THE PRICE TAG?

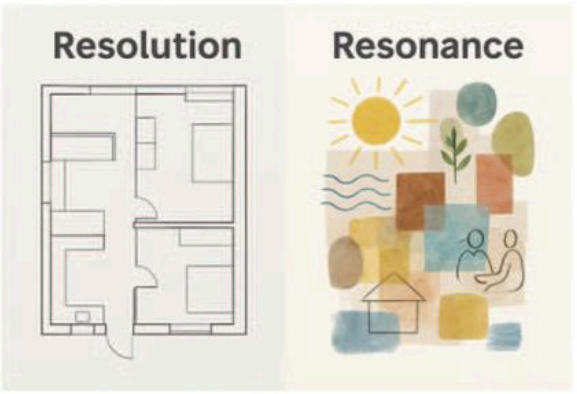
RESOLUTION AND RESONANCE: THE WIDER LENS OF DESIGN FROM PROBLEM-SOLVING TO MEANING-MAKING

AR. JITENDRA MOHAN ARORA

As students of architecture, we were introduced to design through a familiar triad: form, function, and structure. These became the pillars of our studio work and sleepless nights. Every drawing, model, or plan was measured by how well it balanced utility with stability, and whether its form gave it identity. This process trained us to be rigorous: to refine our craft, test feasibility, and discipline our ideas so they could stand in the real world.

Over time, however, I began to notice something. Many of our designs were like neatly solved puzzles—precise, workable, and clear in intent. Yet they often lacked another dimension. They didn't always stir emotion or linger in memory. A classroom block might resolve circulation beautifully, but did it spark curiosity? A housing unit might handle density efficiently, but did it convey warmth? Our training, I realized, emphasized (en)closure more than connection.



FROM RESOLUTION TO RESONANCE

Later, I encountered what I call the designer's approach—a way of thinking that complements architectural discipline while widening its scope. This approach does not discard structure or function; it asks us to look around the problem as much as at it.

It begins with associations—the loose sparks of thought that arise when you hear a word, see an image, or recall a memory. Take "rain": you may think of umbrellas, puddles, or damp shoes. But you might also recall the earthy smell of the first shower, songs of the monsoon, or the intimacy of sharing shelter under a small awning. These are not solutions yet; they are seeds of meaning.

From there, metaphors, cultural references, and lived experiences begin to shape design. Rain might inspire a pavilion that feels like renewal, celebrates rhythm and dance, or offers a cocoon of safety. The point is not to decide too quickly but to let multiple directions unfold before narrowing down.

This approach values multiplicity. Instead of rushing toward the "first right" answer, it encourages us to generate many. We can draft and redraft concept statements, build mood boards to test atmospheres, and let materials carry emotional as well as technical weight. Bamboo feels light and flexible, glass feels open and fragile, brick feels grounded and earthy. Choosing among them is not just a structural decision but also an atmospheric one.

Here, iterations are not minor tweaks—like shifting a staircase left or right—but entirely new design directions shaped by narrative. One pavilion for rain might celebrate play with swings, water mists, and laughter. Another might emphasize stillness with filtered light and dripping water. Both emerge from the same starting point yet tell very different stories.

In this frame, design is not just about juggling form, function, and structure. It is about weaving them together so that the technical and the emotional, the practical and the poetic, merge into a coherent and evocative whole.

A PEDAGOGICAL EXPERIMENT: NAVARASA IN ARCHITECTURAL DESIGN

This shift—from resolution to resonance—found its way into a classroom through a workshop I conducted on the Navarasa, the nine classical emotions of Indian aesthetics. Organized for second-year students at the Faculty of Architecture and Planning, AKTU Lucknow (formerly my own college, GCA Lucknow), the workshop was led by Prof. Dr. Ritu Gulati and her dedicated team of eight faculty members. Its aim was to introduce students to experience-driven design: moving beyond problem-solving into meaning-making.

As a prelude, students visited city sites and recorded their own experiences. They noted what made them feel calm, curious, overwhelmed, or joyful—and traced those feelings back. Was it the light, sound, or air? Or the scale, material, or circulation? This sensitized them to the idea that design is not only what we see but also what we sense and feel.
Grouped into teams, students were each assigned one rasa—peace, laughter, wonder, and others. Their first task was not drafting plans but brainstorming. On large sheets, they poured every word, image, or memory their rasa evoked. We called this a dastarkhwan of ideas—a feast of thoughts laid out without judgment. From these scattered sparks, clusters of meaning emerged. The "wonder" group found connections among the night sky, childhood toys, and temple spires, which came together under scale and surprise. The "laughter" group drew balloons, jokes, and swings, circling back to release and play.
Next came themed mood boards—visual maps pulling together words, colors, textures, and references into a field of mood and meaning. These boards set the emotional temperature of a design. Students discovered how replacing one image—a serene landscape with a bustling street—shifted a board from calm to lively in an instant. The harder step was element boards, where abstraction met form. If peace were a wall, what would it feel like? If laughter were a roof, how would it shelter? Students translated moods into form, material, and atmosphere. One group working on peace created a grid of boards—flowing water, still white space, rhythmic repetition—producing unity without uniformity.

Above: Brainstorming sheet: spontaneous words, doodles, and arrows—the "dastarkhwan of ideas" (Photo Courtesy: Ar. Divyanshi Srivastava)

Above: An example of a student mood board — layered with colors, textures, and evocative references. Notice the joy that collective brainstorming brings

With moods clarified, students asked: What is this space for? Programs emerged organically. The laughter team envisioned playgrounds, outdoor stages, and street corners where joy could spill into daily life.
Only then did visualization begin—sketches, diagrams, models. I urged them to avoid clichés and invent fresh expressions: a pavilion for wonder stretching unexpectedly tall, a plaza for laughter using echo as play.

Above: A grid of "Peace" boards and "Laughter" boards showing coherence in diversity

Above: Studentsexploring multiple directions before closure—each sketch a different possibility

To stay anchored, students used a self-check: Does our design still resonate with the associations we began with? This ensured creativity stayed tied to meaning, not just form.
The workshop culminated in an exhibition: boards, models, and sketches, each carrying the imprint of its rasa. Seen together, they formed a vibrant landscape of emotion-driven architecture—resolving structure while resonating with feeling.

LESSONS LEARNED

What struck me most was how quickly students embraced this broader lens. Freed from the pressure of producing a finished plan too soon, they found value in ambiguity—holding many directions open before narrowing down. For them, design began to feel less like problem-solving and more like storytelling: ideas could breathe, collide, and grow before solidifying.
They discovered that design is not only about closure but also about openness—layered with feeling, rich in meaning, and able to touch those who encounter it. In the process, they learned that rigor and resonance are not opposites but partners: architecture ensures a space can stand; design ensures it can speak.

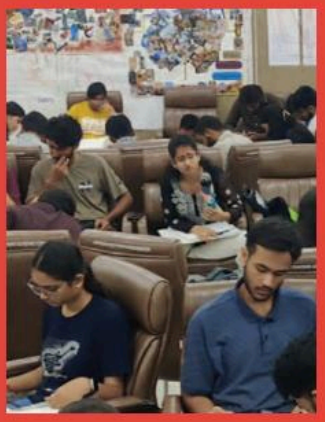
Above:Shots of the final exhibition—students' drawings in a gallery-like setting.

CLOSING THOUGHTS

This, I believe, is where architectural practice today finds its richest possibilities. The postmodern lens—where metaphors, associations, and narratives coexist with structure, form, and function—offers a way to produce architecture that is both grounded and evocative. A building can rise solidly from its foundations while whispering stories, carrying memories, and shaping experiences.

In the end, architecture is not only about solving problems. It is about crafting spaces that stay with people—spaces that stir, comfort, challenge, or inspire. To design this way is to balance the drawing board with the mood board, the structure with the story, the function with the feeling.

Perhaps that is our task today: not merely to resolve, but to resonate.



Above: Students in a quiet, self-realized moment—exploring spatial connections with introspection.

1991–1998 BATCH

AR. Jitendra Mohan Arora works across design education, narrative space-making, and hospitality. His practice blends architectural discipline with a search for resonance, shaping both classrooms and lived experiences.

WATER MANAGEMENT FOR A SUSTAINABLE FUTURE

AR. KIRTI SHARMA

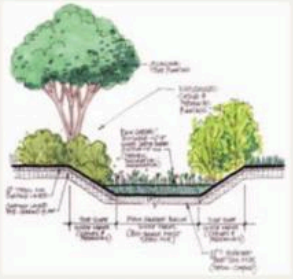
Water is one of the most critical resources for sustaining life, yet, it isincreasinglythreatened by urbanization, industrialization, and mismanagement. Findings highlight that 70% of Earth is water, less than 3% is fresh and usable— landscapes and irrigation systems consume nearly 80% of water resources in Asia, underscoring the urgent need for sustainable strategies. This article argues for a hybrid approach that combines conventional wisdom with smart technologies to achieve water security, support biodiversity, and advance Sustainable Development Goals (SDGs).

Historically, civilizations developed ingenious methods to conserve and utilize water, many of which remain relevant today. Both traditional water management practices and modern technological approaches ensure resilience.

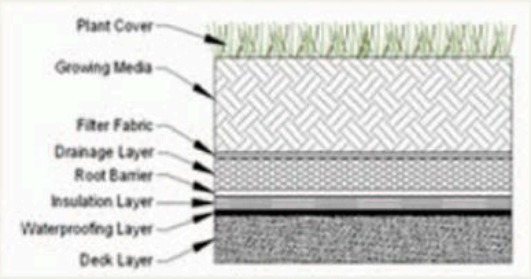
The way forward lies in combining Green, Blue, Grey, and Black infrastructures.

GREEN SOLUTIONS

rain gardens, bio-swales, permeable pavements, and tree canopies—emerge as the most resilient, cost-effective, and ecologically balanced approach, reducing pollution, filtering runoff, recharging groundwater,improve air quality, and enhancing the quality of urban landscapes.

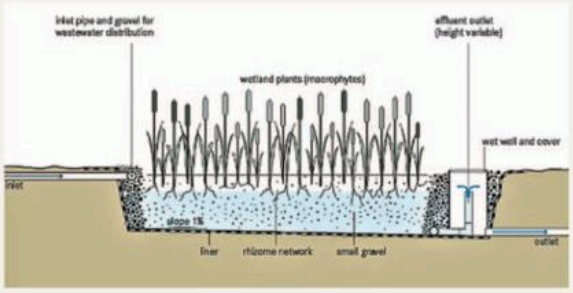


Rain Garden

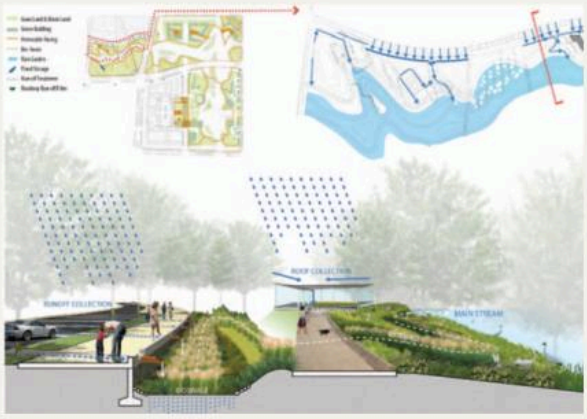


Green Roof

BLUE INFRASTRUCTURE—WETLANDS, RIVERS, AND RESERVOIRS—PRESERVES ECOLOGICAL BALANCE



Wetland



Storm water management (runoff is collected before entering the major waterway)

Grey and Black Systems

Grey and black systems, treat and recycle wastewater, while advanced methods like drip irrigation increase efficiency. It provide necessary support for wastewater treatment and reuse, they are increasingly effective only when integrated with nature-based solutions.

Smart technologies now add precision: digital water meters, sensors, and machine learning tools optimize distribution, detect leaks, and support demand forecasting. Hence, further enhance distribution efficiency and monitoring accuracy.

Studies worldwide—from rain gardens in Japan to mangrove restoration in Vietnam—show that integrated approaches reduce costs, filter pollutants, and protect communities. Green & blue infra, not only mitigate flooding and pollution but also contribute to recreation, aesthetics, and community well-being.

THE CONCLUSION IS CLEAR: sustainable water management is not a choice but a necessity. By blending ancient wisdom with modern innovations, we can conserve water, enhance ecosystems, and secure resilient cities for future generations.

CHIEF ARCHITECT
(SUNDREAM GROUP)

GREATER NOIDA WEST: BUILDING TYPOLOGIES AND ARCHITECTURAL RESPONSIBILITY FOR SUSTAINABLE URBANISM

AR. MOHAMMAD ZIAUDDIN

INTRODUCTION

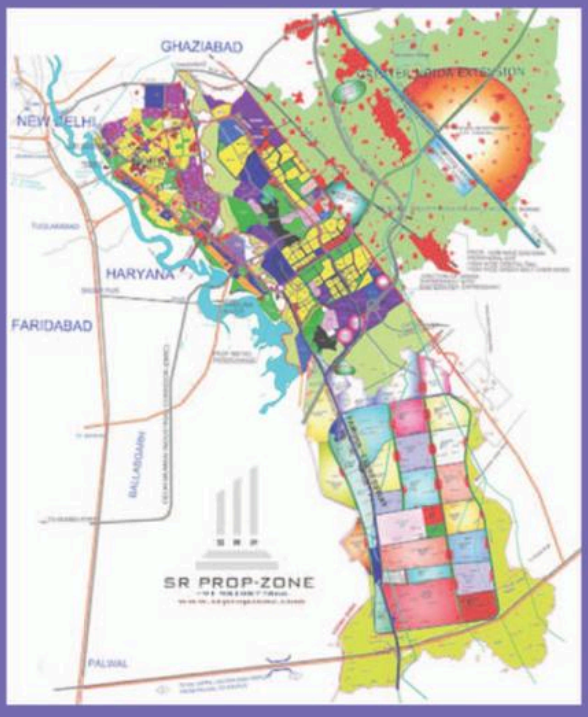
Greater Noida West—once a peripheral tract of farmland—is now one of NCR's fastest-growing urban corridors. Its rise is shaped by proximity to Delhi and Noida, competitive dynamics with Ghaziabad and Gurugram, and major infrastructure projects like the Noida International Airport and Delhi–Ghaziabad–Meerut RRTS. Post-COVID migration has intensified this growth, as families and professionals seek space, affordability, and resilience.

Yet, this transformation raises critical questions. While the region boasts diverse building typologies—high-rise clusters, gated communities, malls, villas, tech parks—the integration of sustainable practices remains inconsistent. Passive design, energy efficiency, water reuse, and waste management are often treated as compliance checklists rather than embedded design strategies.
Existing literature focuses on metro cores or flagship smart city projects, leaving peri-urban zones like Greater Noida West underexplored.

Moreover, the relationship between building typologies and sustainability outcomes is rarely treated as a structured analytical framework.

AIM AND OBJECTIVES:

This article evaluates how building typologies influence the adoption of sustainable practices in Greater Noida West. It identifies performance patterns across key project types, examines the role of infrastructure and urban competition, and reflects on how architects can shape more resilient, inclusive urbanism through typology-sensitive design.



LITERATURE CONTEXT

Sustainable urbanism in India has largely been framed through certification systems (LEED, IGBC), national codes (ECBC), and flagship initiatives like the Smart Cities Mission. While these frameworks emphasize energy and resource efficiency, they often overlook the spatial and typological logic of development. Studies on mixed-use formats and passive design strategies highlight potential benefits, but rarely engage with peri-urban realities shaped by speculative real estate and fragmented governance.

This article builds on architectural theory that treats typology as a determinant of spatial performance, drawing from traditions in ecological urbanism and post-occupancy evaluation.
It contributes by reframing sustainability not as a checklist, but as a typology-sensitive design ethic.

METHODOLOGY AND CASE SELECTION

This study adopts a qualitative, typology-based approach grounded in architectural research traditions that treat building form as a determinant of spatial and environmental performance. Drawing from established literature on spatial logic, ecological urbanism, and post-occupancy evaluation, the methodology separates building typologies and sustainable practices as distinct analytical variables—allowing for clearer causal insight.

Greater Noida West hosts over 100 major projects across residential, commercial, institutional, and tech typologies. From this population, a purposive sample of 14 projects was selected—balancing visibility, typological clarity, and access to sustainability-related data.

Typology	Sample Projects Selected	Typological Role
Residential Township	Gaur City, Godrej Majesty	Large-scale integrated housing with partial green features
High-Rise Residential Towers	ATS Destinaire, Ace Han'ei	Standard podium-tower formats with limited passive design
Mid-Rise Residential	VVIP Addresses	Moderate-density housing with basic compliance
Luxury Villas	RISE Resort Residences, Gaur Mulberry Mansions	Low-density gated formats with ecological landscaping
Commercial Malls	Gaur City Mall, Blue Saffaire Mall	Retail hubs with energy-efficient lighting, weak water/waste systems
Tech Parks & Mixed-Use	Golden I Tech Zone, Astha Tech Zone, Bhutani Mixed-Use Campus	LEED-compliant campuses with smart infrastructure
Institutional Infrastructure	Yatharth Hospital, Yotta Data Centre	Healthcare and data infra with operational sustainability focus

Each project was assessed across four sustainability dimensions:

-Passive Design (orientation, ventilation, thermal comfort)

-Energy Efficiency (solar integration, smart metering, HVAC systems)

-Water and Waste Management (greywater reuse, segregation, composting)

-Certification and Compliance (LEED, IGBC, ECBC adherence)

RESULTS AND SYNTHESIS: SUSTAINABLE PRACTICES VS. BUILDING TYPOLOGIES

The evaluation of 14 sample projects across Greater Noida West reveals that sustainability outcomes are not uniformly distributed—they vary significantly by building typology. By organizing the findings around five core themes of sustainable building practices, a clearer pattern emerges: some typologies inherently support ecological integration, while others constrain it through standardized design, operational limitations, or market-driven priorities.

Tech campuses and mixed-use developments consistently outperform other formats, driven by opcomplexity, institutional visibility, and certification incentives. Villas demonstrate strong ecological features but raise concerns about equity and land consumption. Mid-rise residential projects show balanced potential, especially when backed by design intent and certification. In contrast, high-rise clusters and commercial malls tend to treat sustainability as surface-level compliance, lacking embedded systems or long-term performance tracking.

The table below summarizes these patterns, comparing typologies across key sustainability dimensions. It reinforces the article's central claim: that typology and sustainability must be treated as distinct but interrelated variables in architectural analysis.

Sustainability Theme	Strongest Performing Typologies	Weakest Performing Typologies	Key Insights
Passive Design Integration	Mid-rise residential (Godrej Majesty), luxury villas (RISE)	High-rise clusters (ATS Destinaire, Ace Hanei), Malls	Lower-density formats allow better orientation and ventilation; towers are rigid
Energy Efficiency Measures	Tech campuses (Golden I, Astha), mixed-use (Bhutani)	Commercial malls	Operational complexity drives innovation; malls rely on basic HVAC upgrades
Water Reuse and Management	Villas (RISE, Mulberry), Mid-rise residential	High-rise clusters, Malls	Premium formats invest in systems; others install for approval, not performance
Waste Segregation & Circularity	Tech campuses, institutional buildings (Yatharth)	High-rise residential, Malls	Embedded systems rare; success depends on operations, not design
Green Certification & Compliance	Tech parks (Golden I, LEED Gold), Mixed-use campuses	Malls, High-rise clusters	Certification correlates with performance only when backed by design intent

DISCUSSION: RETHINKING THE ROLE OF ARCHITECTS

Sustainability in Greater Noida West is shaped less by design innovation and more by typology, developer priorities, and regulatory gaps. This challenges the assumption that mixed-use or high-density formats are inherently sustainable. Without typology-specific mandates and performance-based regulation, sustainability remains uneven.

Architects must reclaim agency—not just as designers, but as urban ethicists. Passive design must inform site planning, not just facades. Circular resource systems must be embedded from the outset. Post-occupancy evaluations should become standard practice, ensuring that sustainability claims translate into lived experience.

GNIDA must enforce differentiated benchmarks. Planning processes must involve communities, not just consultants. Developers must shift from marketing to measurable performance and co-invest in civic infrastructure.

Stakeholder	Recommendation	Details / Rationale
GNIDA	Typology-specific mandates	Create differentiated sustainability benchmarks for residential, commercial, tech, and institutional projects.
	Post-occupancy audits	Require third-party sustainability performance reviews 12–18 months after occupancy.
	Incentivize mixed-use, transit-oriented development |	Offer FAR bonuses and fast-track approvals for walkable, integrated campuses.
	Public sustainability dashboard	Publish real-time data on project certifications, water reuse, waste segregation, and energy metrics.
Architects	Reclaim design autonomy	Challenge standardized podium-tower formats; advocate for climate-responsive massing and open space integration.
	Embed circular resource systems	Design for water reuse, composting, and energy monitoring from the outset.
	Practice typology-sensitive ethics	Tailor sustainability strategies to each building type—e.g., villas must justify land use through ecological restoration.
	Initiate post-occupancy evaluations	Collect feedback from users to inform future design and professional accountability.
Developers	Move beyond marketing sustainability	Invest in systems that deliver measurable ecological benefits, not just brochure claims.
	Prioritize mixed-use synergy	Shift from gated enclaves to integrated campuses combining housing, retail, and healthcare.
	Co-develop civic infrastructure	Partner with GNIDA to build transport nodes, pedestrian networks, and decentralized waste systems.
	Disclose sustainability metrics	Publish energy, water, and waste performance data to build trust and set benchmarks.

Conclusion: Designing Cities That Are Truly Lived

Greater Noida West is more than a real estate frontier—it is a mirror to our architectural priorities. Are we building for resilience, or for returns? Are we shaping cities, or merely filling plots?

To answer these questions, we must treat building typologies and sustainable practices not as parallel tracks, but as intersecting forces. Their relationship is not incidental—it is foundational. And understanding that relationship may be the key to designing cities that are not only built, but truly lived.

(Mohammad Ziauddin (GCA Batch: 1991–96) is an Associate Professor and former Head of the Department of Architecture at Jamia Millia Islamia, New Delhi. He holds an M.Arch in Architectural Conservation from SPA, New Delhi, and specializes in urban conservation, regeneration, and governance in Indian cities.)

FROM TRADITION TO INNOVATION:

THE IMPACT OF DIGITAL TOOLS, ONLINE LEARNING AND NEP ON ARCHITECTURAL EDUCATION

DR. MOHIT KUMAR AGARWAL

" मातेव रक्षति पितेव हिते नियुंक्ते। कान्तेव चापि रमयत्यपनीय खेदम्।।लक्ष्मीं तनोति वितनोति च दिक्षु कीर्तिम्। किं किं न साधयति कल्पलतेव विद्या।।"

The role of education in the life of a person has been highlighted in the above-mentioned ancient Indian verse.

It means that education protects like a mother and, as a father, it does good to his children; in the same way, education does good to a man. Like a wife, education pacifies the heart and makes the mind happy by erasing all fatigue. Like Laxmi, by acquiring money, that is, wealth, a person enhances glory and spreads his/her fame in all four directions.

In reality, education, like a 'Kalpavriksh' (a tree that provides any wish), does not leave anything undone. Thus, education means the wealth of knowledge of an individual after studying subject matters and industry demands. It is also about gaining experiences through real-life lessons and industrial practices, which provide an understanding of subject matters. This is true for architectural education as well, but it has been observed that architectural education is not aligned with industrial demands and international standards.

The evolution of architectural education has led to a divergence between traditional and contemporary approaches. Traditional architectural education highlights hands-on training, studio-based learning, and timeless design principles, which are associated with a formal mode of education. This approach focuses on developing fundamental skills among students, such as drafting, sketching, model-making, and manual rendering, which are necessary for understanding the basics of architecture and enhancing imagination and observation skills. These skills prepare students to grasp creativity skills of visualization through sketching and to see things through hands-on exercises. However, traditional architectural education may not adequately prepare students for the demands of modern software and technology, as per industry demands. On the other hand, many faculties also do not prepare themselves according to technological developments.

According to a study, many fresh architecture graduates feel that their education did not provide sufficient training in software skills, such as Building Information Modelling (BIM) and computational design, to cope with industrial needs. These limitations not only create restrictions on their future avenues but also make it challenging for them to adapt to the industry's rapidly changing technological advancements. No matter how good they are in academics, they do not feel confident in the industry. Therefore, they have to take time to prepare themselves

to face the challenges and requirements of the professional world, irrespective of their academic achievements.

On the other hand, contemporary architectural education prioritizes integration with technology, interdisciplinary approaches, and flexibility in curriculum. Students can opt for elective subjects according to their choices available in other courses like interior design, planning, engineering, management, etc. This approach prepares students for the latest software, digital fabrication, and computational design tools, which are increasingly used in the industry, such as generative design, parametric design, complex geometry, optimization, performance analysis, and more. Besides this, the COVID-19 pandemic has also had a significant impact on architectural education, accelerating the adoption of online learning platforms and tools. Although it seems like distant learning, it has significant potential. According to a study, the pandemic has forced architecture schools to rethink and revise their curricula, course structure, and modalities, leading to a more flexible and adaptable approach to education. Online classes have empowered students to access top architecture programs worldwide, removing geographical barriers and increasing accessibility to online resources/e-library.Nowadays, online education has become a vital component of contemporary architectural education, offering numerous benefits, including flexibility, accessibility, and cost-effectiveness. Online courses allow students to learn on their own schedule, making it easier to balance work and study. Even it has opened options for SWAYAM-NPTEL, initiated by 7 IITs along with IISc, Bangalore, to provide quality education to anyone interested in learning from the IITs.
Adding a special touch further, the National Education Policy (NEP) 2020 has brought about significant changes in the Indian education system, and its impact on architectural education is not only substantial but essential. The policy emphasizes holistic and multidisciplinary learning, demanding a re-evaluation of architectural pedagogy. Architects today engage with diverse facets of society, technology, and culture, necessitating a departure from traditional spaces. The NEP 2020 also promotes flexibility and autonomy in education, multi-entry and multi-exit levels, enabling institutions to innovate and experiment with new approaches. The Council of Architecture is in the process of incorporating the guidelines of NEP. Some suggestive measures can be included, such as multidisciplinary learning, technological advancement as per global standards, enhancing industry connections, options for multi-entry and multi-exit, research/industry-based projects, inclusion of traditional Indian knowledge systems, addition of online courses, and skill-oriented holistic development, etc.

In response to these challenges, architectural education is evolving to incorporate new technologies and approaches. Some key trends include an increased focus on technology, interdisciplinary approaches, and flexibility and autonomy. Architectural education now places a strong emphasis on technology, including software skills, digital fabrication, and computational design. Interdisciplinary approaches are also becoming more prevalent, integrating fields like engineering, sustainability, energy, climate, and social sciences. The future of architectural education is likely to be shaped by the increasing demand for online and blended learning programs. As technology continues to advance, online education will become even more sophisticated, offering students more interactive and immersive learning experiences. Architectural education will need to adapt to the changing needs of the process, incorporating new technologies and approaches to prepare students for the challenges of the 21st century.

Foundations That Last.. *A Perspective*

AR. NITIN AGARWAL

" Back then, our aspirations were boundless. We dreamed of building daring design projects, driven by professors who reminded us that success often comes down to joining edges — whether of construction sheets or of ideas. That philosophy instilled in us a determination to aim higher, to believe that our work could find a place on the world stage. "

13 10'96

On quiet mornings at the boys' hostel, the view often drifted toward the modest ditch surrounding

Rakesh ki Canteen.

That was our gathering spot — where steaming cups of chai and butter-laden parathas fueled conversation, debate, and camaraderie. Weekends felt incomplete without those rituals; simple yet unforgettable.
Weekdays had a different rhythm. Professor Srivastava's structural classes demanded rising early and being alert and prepared. His lectures went beyond formulas and design theory. Through his sharp humor and insistence on discipline, he taught us precision, accountability, and the importance of participating fully — lessons that shaped far more than just our technical knowledge.
Back then, our aspirations were boundless. We dreamed of building daring design projects, driven by professors who reminded us that success often comes down to joining edges — whether of construction sheets or of ideas. That philosophy instilled in us a determination to aim higher, to believe that our work could find a place on the world stage.

My journey eventually moved into software security — a field far removed from what we envisioned during those chai breaks and late-night drawing sessions. Yet, the lessons translated seamlessly. Facing tough jury panels prepared me for high-stakes boardroom discussions. Juggling overlapping submissions mirrored the balancing act
of complex security projects. Mentoring colleagues today feels much like guiding juniors through their first critiques. Different domain yet same foundations.

Most enduring of all are the relationships. The friendships forged in shared stress before reviews, the laughter during canteen breaks, and the unspoken support of peers who understood the struggle — however silent, those bonds remain. They remind me that what we gained at GCA was never only about engineering or design. It was about resilience, collaboration, and the courage to dream beyond the horizon. Those days may be behind us, but their imprint is permanent. The laughter, the lessons, and the bonds continue to guide me today — proof that the foundations we built then still hold strong, no matter whereever life has taken us.

Designing for the Future: Architects at the Forefront of Retail Evolution

AR. PANKAJ VERMA
BATCH OF 2000

As we celebrate 25 years since stepping into the world as architects, it is both humbling and exhilarating to witness the seismic shifts in our profession. Among the many sectors we've shaped and reshaped, none has evolved as rapidly or dramatically as retail. From bustling high streets to immersive flagship experiences and digital-native pop-ups, retail has become a dynamic canvas...an ever-adapting interface between commerce, technology, and human emotion. Architects have been at the heart of this transformation.

The Retail Renaissance: From Transactional to Experiential

The retail environment is no longer just a place of transaction; it is an experience. It is theatre, gallery, community, and story all rolled into one. With e-commerce growing at a blistering pace, physical retail has had to redefine its value. This shift has been a clarion call to architects: our role is no longer just to design functional spaces, but to create human-centric experiences that engage, surprise, and resonate.

The modern consumer seeks more than a product...they seek meaning, connection, and memory. As architects, we are uniquely positioned to curate this. Whether it's through the use of spatial rhythm, natural light, tactile materiality, or flow; our understanding of form and atmosphere becomes the silent language of retail storytelling.

Technology as a Tool, Not a Destination

The infusion of technology into retail... augmented reality, AI-driven personalization, smart fitting rooms, and digital touchpoints has revolutionized the way brands connect with consumers. But here lies a subtle challenge to ensure that technology enhances rather than overshadows the human experience.

Architects are the guardians of this balance.

We design the interface between the digital and the physical. We determine how tech is embedded into space discreetly, intuitively, and purposefully. Our task is to weave technology into the fabric of design so seamlessly that it feels like an extension of the user's own behaviour rather than an imposition.

Take, for instance, the new-age concept stores where biometrics and data analytics may dictate product

that compel a shopper to linger, to explore, to engage. That's where our discipline speaks loudest.

Human Spaces in a Hyperconnected World

In an era increasingly defined by screens and algorithms, the need for authentic human spaces has never been more critical. This is where architectural thinking transcends aesthetics and enters the realm of sociology, psychology, and anthropology.

Retail spaces must now serve as social condensers places of community interaction, inclusivity, and cultural dialogue. From adaptive reuse of heritage buildings into vibrant marketplaces to neighbourhood pop-ups that blur the lines between shopping and storytelling, our generation of architects has played a critical role in re-humanizing commerce.

By integrating biophilic design, sensory cues, and spatial democratization, we create environments that not only reflect brand identity but also nurture well-being and connection. In this, we uphold our most sacred architectural value: designing for people

The Road Ahead: Architects as Retail Futurists

As we look to the future, our role as architects will become even more interdisciplinary. We will collaborate with data scientists, environmental psychologists, digital technologists, and brand strategists. We will design for carbon neutrality and social equity. And most importantly, we will continue to champion the idea that good design is, at its core, about empathy.

As members of the Silver Jubilee batch, we carry with us not only decades of experience but also the vision to guide the next chapter. We must mentor, collaborate, and innovate, fueling a generation of architects who understand that retail is not merely about selling, but about serving human needs in all their diversity.

A Legacy Built in Brick, Byte, and Belief...

Retail is changing, but so are we. As architects, we have evolved from space-makers to experience curators, tech integrators, and cultural stewards. In this transformation lies our enduring relevance and profound responsibility.

To the new architects reading this, may your work honour the balance between innovation and intuition, between machine logic and human magic. And to our fellow batchmates, here's to 25 years of shaping spaces and souls. The journey continues, one story, one space at a time until we meet again

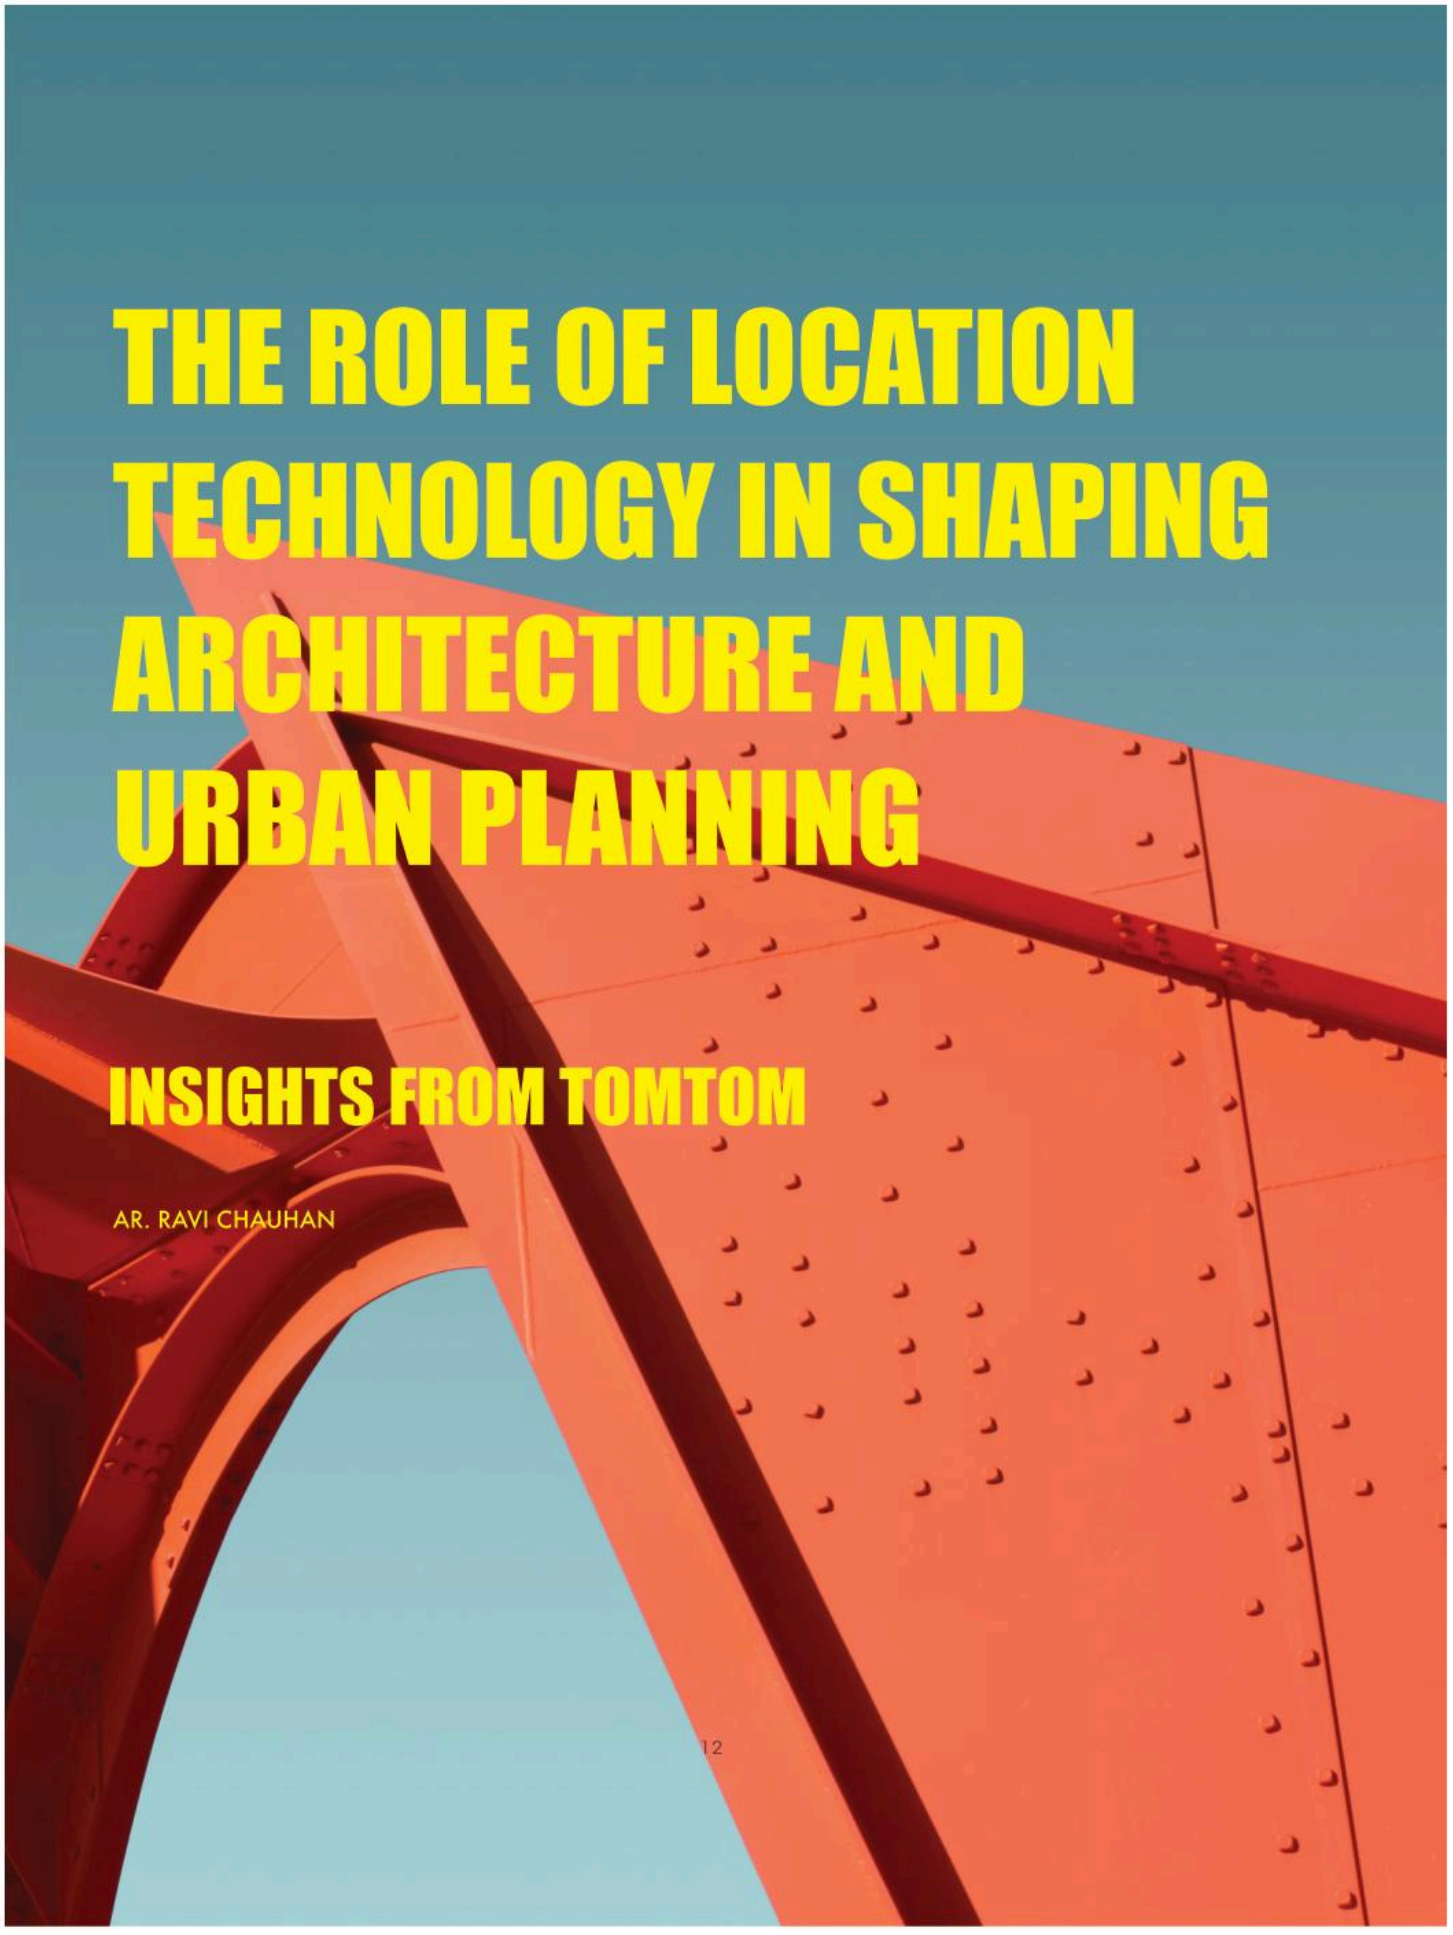
Designing for the Future: Architects at the Forefront of Retail Evolution



THE ROLE OF LOCATION TECHNOLOGY IN SHAPING ARCHITECTURE AND URBAN PLANNING

INSIGHTS FROM TOMTOM

AR. RAVI CHAUHAN

INTRODUCTION

In the digital era, location technology has emerged as a cornerstone for decision-making across industries.

What was once the domain of paper maps and static directions has now evolved into dynamic platforms that integrate real-time data, advanced analytics, and global connectivity. Among the leaders in this transformation is TomTom, a company that began with personal navigation devices and now provides global mapping, traffic, and geospatial services that underpin not only navigation apps but also urban planning, architecture, and smart mobility solutions.
This paper explores how TomTom's location technology influences modern architecture and urban planning, demonstrating its role in shaping sustainable, connected, and resilient environments. By analyzing data-driven insights and their applications, we highlight how cities and buildings can be designed to meet the demands of future generations.

From its origins as a navigation device provider, TomTom has transitioned into a technology platform offering products such as the Genesis and Orbis Mapping Platform along with APIs and Solutions like Traffic, Routing, Junction Analytics, Safety Cameras and Fleet Management. These platforms combine sensor data, user feedback, satellite imagery, and AI-driven updates to maintain one of the most accurate global mapping systems.
Such advancements make it possible for planners and architects to simulate traffic flows, evaluate accessibility, and anticipate the impact of infrastructure projects. What was once limited to navigation is now central to urban decision-making and design.

EVOLUTION OF LOCATION TECHNOLOGY

The evolution of location technology reflects humanity's broader quest for precision and efficiency.
Early maps offered only approximate guidance, while today's digital systems provide real-time, hyperlocal insights into mobility, safety, and the environment.
TomTom has been at the forefront of this journey.

URBAN PLANNING & SMART CITIES

Urban planning has always relied on spatial intelligence, but the granularity and timeliness offered by TomTom's data bring this practice to an entirely new level.
One of the biggest challenges for cities is managing congestion. TomTom's annual Traffic Index, derived from billions of data points, offers detailed views of traffic density, peak times, and bottlenecks.

Urban planners use these insights to redesign intersections, optimize signal timings, and introduce traffic-calming measures.

Sustainability is another dimension. Cities must balance economic growth with livability. TomTom data enables planners to assess areas for public transport corridors, EV charging infrastructure, and bicycle lane expansion. By analyzing demand and traffic exposure, planners can strategically allocate resources for the greatest impact.

Public safety also benefits. Accident-prone locations, identified through traffic and safety camera data, can be redesigned with better signage, roundabouts, or pedestrian-friendly crossings. The result is a city that is not only more efficient but also safer for its citizens.

ARCHITECTURE & THE BUILT ENVIRONMENT

For architects, the location of a building is as critical as its design. TomTom's datasets help architects and developers make better-informed choices before a single foundation is laid.

Site selection is one area of impact. Using traffic, accessibility, and demographic data, architects can evaluate whether a location is suitable for residential, commercial, or mixed-use development. A residential complex, for instance, might prioritize proximity to schools, healthcare facilities, and green spaces—information TomTom's Points of Interest (POI) and traffic datasets provide in depth. Beyond location, TomTom's insights help architects design for environmental conditions. Traffic density maps can guide the orientation of buildings to minimize noise or air pollution exposure. Predictive models can help estimate future traffic growth, allowing designs that remain resilient over decades.

INFRASTRUCTURE AND MOBILITY INTEGRATION

Location technology extends beyond individual buildings to the infrastructure that connects them. TomTom plays a central role in enabling integrated mobility systems.

In logistics and transportation planning, TomTom's truck routing data considers restrictions such as height limits, weight constraints, and border crossing rules. While "avoid border crossing" is modeled as a soft avoid—penalized but not forbidden—this reflects real-world complexities where some crossings are unavoidable. Such detail ensures planners design infrastructure that aligns with both regulatory frameworks and practical mobility needs.

Public transit systems also benefit. By analyzing flow and congestion patterns, planners can determine where to expand bus routes or introduce light rail. In emergencies, real-time feeds support evacuation planning by identifying the fastest, safest routes for large populations.

CHALLENGES AND CONSIDERATIONS

While the potential of location technology is vast, challenges remain.

- Data privacy and ethics: With great details comes responsibility. TomTom emphasizes anonymization and GDPR compliance, but policymakers must ensure equitable safeguards.

- Interoperability: Different mapping standards may complicate alignment with government datasets. Planners need robust integration strategies.

- Equity: Technology-driven planning must avoid reinforcing inequalities. Accessibility for marginalized communities should remain a priority.

FUTURE OUTLOOK

The future of location technology is intertwined with AI, machine learning, and predictive analytics. TomTom is already incorporating these into traffic forecasting and map generation. In the near term, such innovations will allow cities to anticipate congestion before it happens and architects to design spaces that adapt dynamically to user needs. Autonomous mobility ecosystems will further push the demand for highly accurate, real-time mapping. Cities designed with this in mind will integrate charging stations, sensor networks, and flexible road infrastructure.

CONCLUSION

Location technology has evolved into a strategic enabler for modern architecture and urban planning. TomTom's advanced mapping, traffic, and geospatial services extend far beyond navigation, influencing how cities grow, how infrastructure is built, and how buildings interact with their environment.
From optimizing transport systems and enhancing sustainability to designing resilient architecture, TomTom's technology empowers planners and architects to create human-centered, future-ready urban landscapes. As we move toward an era of smart cities and autonomous mobility, the collaboration between geospatial technology providers like TomTom and the fields of architecture and urban planning will be essential.

कैसे बताऊँ क्या है GCA

AR. NIRBHAY SHUKLA

कैसे बताऊं क्या है जीसीए।

जीवन का एक खास हिस्सा, ३० सालों का यादगार है जीसीए।

खुद में ही एक दुनिया, एक संसार है जीसीए।

दोस्तों के साथ वो तकरार और वो प्यार,

सीनियर्स का वो त्याग और वो उधार,

जूनियर्स का सम्मान और एहतराम है जीसीए।

राकेश की डेढ़ रुपए की चाय और ढाई रुपए की सैंडविच,

हरीश का ८ रुपए का खाना और खाने से ज्यादा बर्बाद करना, उसके शिकायतों का पिटारा और नमक कम ज्यादा होने पर रेट आधा करना है जीसीए।

कैसे बताऊं क्या है जीसीए।

गर्मी की छुट्टियों में दिन भर डीपी सर और लाला के साथ कूलर में सोना और कढ़िले की लस्सी पराठा खाना, चुटकुलों की नौटंकियां और कोंडा की कहानियां है जीसीए।

वो चड़क्या के लड्डू, वो मोतीमहल के रसगुल्ले, वो मार्क्समैन के पावभाजी, रोज सिनेमा देखना और शाम की गंजिंग है जीसीए।

अक्सर ही ३ बजे रात दोस्तो के साथ बाइक पर निकलना और पायनियर पर बन मक्खन और चाय पीना है जीसीए।

हर रात हॉस्टल में हंगामा और पीछे से दास सर का चिल्लाना,

यू जोकर मीट मी टुमारो मॉर्निंग,

कल सुबह घर आना।

डर से रात भर बिना सोए, सुबह सुबह उठ के ठंडे पानी में नहाना, परफ्यूम लगाना और साफ सुथरे कपड़े पहन के दास सर के घर जाना और सोचना पता नहीं आज क्या होगा, कहीं फिर से पिताजी को तो नहीं है बुलाना!

तू साला इतना पीता क्यों है, कि हर रात होश खो देता है!

इतना सुनते ही कॉन्फिडेंस का वापस आना और बोलना, क्या सर पीना तो दूर की बात है,

मैं तो दारू सुंघा भी नहीं कभी,

सर का गुस्से में घूरना और फिर डांटना,

मुझे बताता है, मैं १८ साल से दारू पीता है, मुझे सब पता है कि तू क्या क्या करता है।

आगे से नहीं करना अब,

अच्छा जाओ और पढ़ाई करो,

मुंह छुपा के हंसना और

शाम को फिर से वही हरकते करना है जीसीए।

कक्कड़ सर का अक्सर शीट रिपीट करना, साबहात सर का मुस्कुरा के डराना, वंदना मैडम का अपना अलग ही अंदाज, नांगिया सर का वो डायलॉग–देखता हूं तुम्हे पास कौन करता है, और नेहरूलाल सर का खौफ है जीसीए।

क्या क्या बताऊं क्या है जीसीए, बस करता हूं, अब तक तो समझ न पाया क्या है जीसीए।

फिर कैसे बताऊं क्या है जीसीए।

कैसे बताऊं क्या है जीसीए।

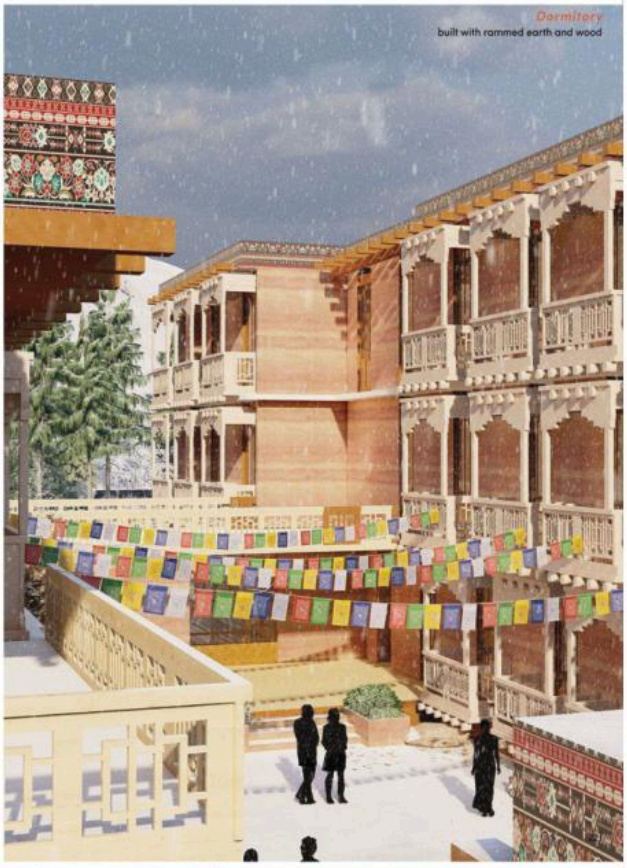
Earth & Light: A Courtyard Retreat for Artists

This dormitory is envisioned as a serene haven for artists and guests, combining privacy with shared community experiences. Each unit offers a single room with an attached toilet, arranged around a central courtyard that encourages interaction and calm reflection. Built using rammed earth walls and wooden-detailed balconies, the structure embraces sustainability while maintaining a warm, tactile aesthetic.

A stepped layout follows the natural terrain, and a common mess hall serves as a social core. Glass façades with wooden framing allow for natural light and visual connection, creating a soulful, climate-responsive space for creative minds to pause, connect, and breathe.

Rooted in the spirit of Ladakhi architecture, this dormitory uses rammed earth walls and intricate wooden balconies to blend beautifully with the cold desert's cultural and climatic landscape.

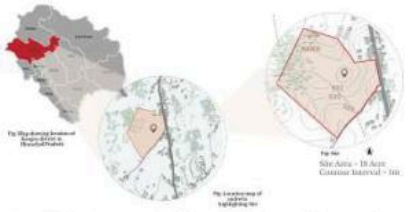
Designed for artists and guests, the stepped structure opens to a central courtyard and communal mess, offering warmth, connection, and quietude amid snow-covered mountains and prayer flag skies.



SAUMYA PATEL

"DEVAshilp"

Artisan Village Cum Vocational Training Centre, Andretta, H.P.



Devashilp is conceived as an artisan village and vocational training centre that aims to revive, nurture, and promote traditional crafts while creating a self-sustaining ecosystem for artisans. The project integrates spaces for craft production, training, exhibition, and community living, allowing artisans to learn, work, and showcase their skills within one cohesive environment.

Rooted in the philosophy of "craft as culture and livelihood," the centre bridges the gap between heritage craftsmanship and modern needs. Devashilp draws inspiration from vernacular design principles, using local materials, passive techniques, and climate-responsive planning to create an environment that is both functional and contextually grounded.

किस्से,कहानी संग लिया कॉलेज का जिम्मा

आर्किटेक्चर कॉलेज की अल्मनाई जॉब्स व स्कॉलरशिप के लिए करेंगे मदद

■ एनबीटी, लखनऊ

आर्किटेक्चर कॉलेज की धरोहर अब अल्मनाई संभालेंगे। कॉलेज की अल्मनाई असोसिएशन यहां के मेधावियों को स्कॉलरशिप देगी, साथ ही नौकरी के मौके भी तलाशेगी। इसके लिए असोसिएशन ने अपनी वेबसाइट शुरू की है जिसमें सभी अल्मनाई का डाटाबेस जुटाया जाएगा।

आर्किटेक्चर कॉलेज के दर्जा पाने के 33 साल बाद गठित हुई अल्मनाई असोसिएशन ने दो दिनों की मीट में मस्ती ही नहीं कॉलेज के डिवेलपमेंट का खाका भी खींचा। असोसिएशन के महासचिव अनुपम मित्तल ने बताया कि सालों के बाद पुराने साथी जुटे हैं। हम कॉलेज के विकास के लिए जितनी भी मदद होगी उपलब्ध कराएंगे।

वेबसाइट से कनेक्ट होंगे अल्मनाई : मित्तल ने बताया कि जल्द शुरू होने वाली वेबसाइट से 900 अल्मनाई कनेक्ट हो चुके हैं। मीट में 300 साथी आए भी हैं। कुछ विदेशों में हैं, ऐसे में सबको एक साथ जुटा पाना संभव नहीं है। कॉलेज का कोई भी अल्मनाई इस पर रजिस्टर कर सकेगा। इसके लिए www.gcaalluninae.com पर लॉगिन करके कोई भी पुराना छात्र कनेक्ट हो सकेगा। यह वेबसाइट जल्द शुरू हो जाएगी। इसका लिंक कॉलेज की वेबसाइट पर भी मिलेगा।

इंटर्नशिप और जॉब्स में मदद : अल्मनाई का डाटाबेस बहुत मायनों में कॉलेज के छात्रों के लिए ही काम आएगा। मित्तल ने बताया कि कॉलेज के छात्रों के लिए उनके सीनियर्स प्लेटफॉर्म का काम करेंगे। इससे उन्हें जॉब्स और इंटर्नशिप के लिए बेहतर ऑप्शन मिलेंगे।

आर्किटेक्चर कॉलेज में अल्मनाई मीट के दौरान स्टूडेंट्स ने खूब मस्ती की।

एकेडमिक्स को भी फायदा : अल्मनाई कॉलेज में एकेडमिक्स को बेहतर करने में भी आगे आएंगे। इसके लिए सीनियर्स स्पेशल लेक्चर्स और अन्य अकादमिक गतिविधियों में सहयोग करेंगे। लाइब्रेरी के लिए बेहतर किताबें उपलब्ध कराई जाएंगी। मित्तल ने बताया कि हमने दो श्रेणी में टॉपर्स को स्कॉलरशिप देना शुरू कर दिया है इसे और बढ़ाया जाएगा।

बैंबू आर्किटेक्चर संवारेगा बैंगलुरू मैट्रो स्टेशन

विदेशों में बैंबू आर्किटेक्चर पर तेजी से काम हो रहा है। थाईलैंड और मलेशिया में रिसर्च और अन्य गतिविधियों में तेजी आई है। यहां बांस काफी पॉपुलर है। इसके साथ ही यूरोपीय देशों में भी बांस पर काफी काम हो रहा है। अब भारत के बैंगलूरू में बांस के उपयोग से मैट्रो स्टेशन बनाने पर काम शुरू हुआ है।

यह बातें बैंबू आर्किटेक्ट नीलम मंजूनाथ ने रविवार को कॉलेज ऑफ आर्किटेक्चर में अल्मनाई मीट में 'अपने अल्मनाई को जानें' कार्यक्रम में कही। उन्होंने बताया कि बांस का उपयोग हम ब्रिज, घर और तमाम ऐसी चीजें बनाने में कर सकते हैं जिनके लिए हमें बहुत सी रकम खर्च करनी पड़ती है। यह सजावटी के साथ थोड़े से बदलावों के बाद काफी मजबूत भी है। नीलम ने बताया की बैंगलुरू मैट्रो कॉर्पोरेशन भी ग्रीन बिल्डिंग्स और बांस के उपयोग को प्रोत्साहित कर रहा है। इसके लिए मेट्रो ने उनकी फर्म के साथ बांस के उपयोग पर काम भी शुरू किया है। इंटीरियर डिजायनिंग में भी इसे उपयोग में लाया जाएगा। मध्य प्रदेश में इंदिरा आवास योजना के तहत बनाए जाने वाले घरों में बांस का काफी उपयोग किया जाएगा।

बनेंगे 51 ग्रीन एयरपोर्ट : अल्मनाई मीट में आए एयरपोर्ट अथॉरिटी ऑफ इंडिया के सहायक महाप्रबंधक आर्किटेक्चर अनुराग मिश्र ने बताया की अब आर्किटेक्चर में ग्रीन बिल्डिंग्स पर फोकस बढ़ गया है। इसे देखते हुए मिनिस्ट्री ऑफ सिविल एविएशन ने 51 लो कॉस्ट एयरपोर्ट बनाने का फैसला किया है। इन एयर पोर्ट्स की खास बात यह होगी कि यह ऊर्जा की खपत के लिहाज से काफी संतुलित होंगे। इमारत में खर्च होने वाली बिजली भी यह खुद ही उत्पन्न कर सकेंगे। इनमें सोलर पैनल्स का उपयोग काफी किया जाएगा। साथ ही इन्हें देश के दूर दराज स्थानों को कनेक्ट करने के लिए तैयार किया जा रहा है। आने वाले दिनों में छोटे-छोटे शहरों में भी हवाई यात्रा की सुविधा लोगों को मिल सकेगी।

आर्किटेक्चर कॉलेज में अलमनाई मीट में हुए सांस्कृतिक कार्यक्रम।

...और याद आ गई 33 साल पुरानी क्लास

■ जीसीए में हुई अलमनाई मीट में मस्ती से सराबोर हुआ माहौल

■ एनबीटी, लखनऊ : 33 साल पहले की क्लास की यादें एक बार फिर ताजा हो गईं। कॉलेज वही था और फ्रेंड्स भी। पुराने गुरूजन पहले बैच के साथियों के साथ मौजूद थे। पहले प्रिंसिपल ने माइक पकड़ा तो उनकी क्लास भी शुरू हो गई। मौका था गवर्मेंट कॉलेज ऑफ अर्कटिक्चर (जीसीए) की पहली अलमनाई मीट का। पास आउट छात्र एक बार फिर पुरानी यादों को ताजा करने के लिए कॉलेज में जुटे थे। जिनसे बात नहीं हो पाती थी उनसे खूब बातें हुईं और घरवालों के हालचाल भी लिए। सभी ने मिलकर खूब मौजमस्ती की और अपने पुराने किस्से भी सुनाए, जिसे सुनकर मौजूद लोग ठहाके लगाने से खुद को नहीं रोक पाए।

प्रिंसिपल साहब ने ली सबकी क्लास : कॉलेज के संस्थापक प्रिंसिपल प्रो. डीसी थापर 80 की उम्र पार कर चुके हैं लेकिन जब उन्होंने मंच से माइक पकड़ा तो उनका पुराना अंदाज फिर जवां हो गया। उन्होंने बोलना शुरू किया तो ऐसा लग रहा था कि जैसे फिर क्लास लेने लगे हैं। उन्होंने बीच-बीच में स्टूडेंट्स को डांट भी लगाई और तकनीकी विकास के साथ आर्किटेक्चर में हो रहे बदलावों पर लेक्चर भी दिया। क्लास बंक करने में एक्सपर्ट सिलवर जुबली बैच के साथ 98-99 बैच के छात्रों ने इस बीच थोड़ी नींद मारकर थकान भी मिटाई। प्रो. कक्कड़ ने जब माइक थामा तो क्लास बंक न करने की सलाह दी। इस पर छात्र वंस मोर कहने से नहीं चूके।

फैमिली संग पहुंचे आर्किटेक्ट : 1986 से बीते साल तक पास हुए सभी स्टूडेंट्स को समारोह का न्योता दिया गया था। इनमें 2000 बैच तक के ज्यादातर अलमिनाई पत्नी और बच्चों समेत के साथ आए थे। कई के बाल सफेद हो चुके थे और आंखों पर मोटा चश्मा भी लग गया था।

वापस कर रहे हैं लाइब्रेरी की किताबें : इंटरेक्टिव सेशन में जिसे भी मौका मिला, उसने साथियों और गुरूजनों की पोल खोलने में कोई कसर नहीं छोड़ी। सिल्वर जुबली बैच के छात्रों ने कुछ किताबें उपहार में दीं तो जूनियर साथियों ने कमेंट भी किए। समारोह के दौरान गौतम बुद्ध टेक्निकल यूनिवर्सिटी के कुलपति प्रो. आरके खांडल, प्रतिकुलपति प्रो. डीएस यादव, कॉलेज के प्राचार्य प्रो. जगबीर सिंह और अलमनाई असोसिएशन के अध्यक्ष प्रो. सवहात भी मौजूद रहे।

TIMES CITY

First reunion meet at GCA

Lucknow: The alumni association of the Government College of Architecture, Lucknow organised a two-day reunion meet which began on Saturday.Most alumni came along with their families to have a feel of the good old college days.Recalling the past days,an alumni from the first batch said,'' The feeling today is also the same as it was 33 years ago when I entered the classroom waiting for the principal to deliver the speech.

Established in 1911 as Department of Architecture in Government College of Arts and Craft,the GCA was given an independent status in 1979. It was then renamed as Government College of Architecture.The College is today known as Faculty of Architecture and affiliated to Gautam Buddh Technical University.

Students performing during GCAs reunion meet

The alumni have bagged some of the prestigious awards like the Indian Architecture & Design Award,Indian Building Congress Award, Indian Building Congress Award.Vipul Varshneya,an alumni of 1989 batch, has been conferred with UP Ratan 2013 by Indian Conference of Intellectuals.Besides,the alumni have authored many books on architecture like The Corbs Capital- Chandigarh; Lucknow- A Treasure; and Bamboo Technology for the future.Their articles and papers have been published in several international journals and magazines. GCA ALUMNI ASSOCIATION

north chapter

The inaugural edition of the **'GCAAN Flow with Life'** program took place in February 2025 at the India Islamic Cultural Centre (IICC) in New Delhi. The event featured three segments, showcasing the journeys of esteemed alumni.

The first segment, **'Conquering Challenges',** featured Architect Vishal Mittal, who shared his personal story of overcoming obstacles and achieving success.

The second segment, **'Diversified Paths',** highlighted the experiences of Architect Anand Khatri, who has made a mark in the field with his study of Urban Villages.

The third segment, **'Beyond Academics'**, showcased the extracurricular talents of Architect Devarshi Chakravarti & Architect Ashim Bhattacharya in an engaging singing. Shashank Misra expertly emceed the event, which drew a large gathering of alumni from the Delhi NCR region.

The event also marked the launch of GCAAN's newsletter, **'ANUGACHCHHATU PRAVAHAM'.** The newsletter featured contributions from numerous alumni, showcasing their thoughts and experiences.

It was announced that 'ANUGACHCHHATU PRAVAHAM' would be a quarterly publication, providing a regular platform for alumni to connect and share their stories.

07th February 2025 – India Islamic Center, Lodhi Road.

The event drew a distinguished gathering of senior alumni, including Architect Vivek Sabharwal, Architect Dr Atul Gupta, Architect Sanjay Mittal, Architect Amit and Anubha Khullar, Architect Parul Maheshwari, and Prof Dr D.P. Singh. The GCAAN team, led by Chairman Architect Dr Harish Tripathi, Vice Chairman Architect Anand Khatri and Treasurer Architect Vipul Singh, was also well-represented, adding to the event's prestige and enthusiasm.

07th February 2025 – India Islamic Center, Lodhi Road.

GCAAN served as the Knowledge Partner for the International Conference on "**Energy Efficient Housing: Concept and Construction Techniques**", held at the Department of Architecture & Regional Planning, Gautam Buddha University, Greater Noida, from August 23rd to 25th, 2025.

The conference was chaired by our distinguished alumnus, Architect Madhuri Aggarwal, adding prestige to the event. This conference provided a platform for experts and professionals to share insights and research on sustainable housing practices, exploring innovative concepts and techniques for reducing energy consumption and promoting eco-friendly construction.

The event featured keynote speakers, paper presentations, and panel discussions, fostering a dynamic exchange of ideas and knowledge sharing among participants.

Our esteemed alumni made significant contributions to the conference, presenting papers and sharing their expertise. They included Dr. Harish Tripathi, Chairman of GCAAN, Dr. (Prof.) Ritu Gulati, HOD of FOAP at AKTU, Lucknow, Dr. (Prof.) D.P. Singh, Dean of ASAP at Amity University, Noida, and Dr. (Prof.) Farheen Bano from FOAP, AKTU, Lucknow, Dr Tarush Chandra, Dr Ayla Khan, Dr Ekta Singh to name a few.

Their presentations and discussions enriched the conference, offering valuable insights and perspectives on energy-efficient housing. The alumni's participation underscored GCAAN's commitment to advancing knowledge and innovation in architecture and planning. Their engagement helped foster a stimulating exchange of ideas, further enhancing the conference's impact and relevance.

The event was graced by several distinguished alumni, including Prof. Md Ziauddin (JMI, New Delhi), Architect Alok Singh, Architect Vishal Mittal, Architect Ramit Trehan, Architect Anup Nigam, Architect Nitin Misra, Architect Yogesh Chhabra, Architect Gaurav Saini, Architect Mudit Gupta, Architect Gorky Srivastava, Architect Manish Singh, Architect Shyamal Misra, Architect Akshat Jain, Architect Deepak Srivastava, Architect Rahul Khare, Architect Md. Nadeem, Architect Prince Garg, Architect Aakash Panchal and many more .

Their participation added to the event's significance, making it a memorable alumni meet as well. The gathering provided a valuable opportunity for networking, reconnecting, and sharing experiences, strengthening the bonds within the GCAAN community.

The GCAAN team, led by Architect Dr. Harish Tripathi, worked tirelessly to ensure the program's success. The team, which included Architect Anand Khatri, Architect Dr. Yogesh Tyagi, Architect Vipul Singh and Architect Sarika, put in considerable effort to make the event a grand success. Their dedication and hard work were instrumental in making the program a memorable and impactful experience.

GCAAN Advisor Architect Shashank Misra played a pivotal role in making the program a grand success, leaving no stone unturned in his efforts. His invaluable guidance, expertise, and dedication were instrumental in shaping the event's agenda and ensuring its smooth execution.
